Craigmyle News

The death occurred in Craigmyle Hospital on Monday, 6th inst., of Mrs. Mary Moon, aged 81 years, of the Endiang district, immediately following her admission to the hospital suffering from heart trouble. The funeral service was conducted at the local United Church on Wednesday afternoon, 8th inst., by Rev. K. F. Weintzel of the Evangelical Lutheran Church, in the presence of a large assemblage of friends of the deceased and her family, after which interment was made in Craigmyle Cemetery. To her son, Sveud P. Moon, and the other members of the family, the sympathy of the community is extended.

The Ladies' Aid of the United Church held a very successful tea and sale of home cooking, etc., in the church basement last Saturday afternoon, at which the sum of $22 was realized.

There has been a very severe type of cold, or rather likely "flu," going the rounds locally lately, and it is about time it took its departure.

Craigmyle Choral Society have been practising hard and faithfully at the musical, "Queen Esther," and next Friday evening, 10th inst., are going to present it in the local United Church under the auspices of the Ladies' Aid.

Miss Hester Bell, who is attending Normal School in Calgary; Jack Darcy, who is attending Crescent Heights High School, Calgary; and Roy Simpson, who is attending the Agricultural College at Olds, returned home last Thursday night to spend the Easter vacation with their parents here.

The first golf club annual meeting was held last Monday evening in St. Denis's Drug Store, and the following officers were elected for the ensuing season:—H. D. Crouse, president; Miss Bell, vice-pres.; Miss D. L. Stone, sec.-treas.; Messrs. J. D. J. McDonald, R. M. Wigen, R. C. Hall, C. F. Bell, greens committee; Messrs. McDonald and Stone, handicap committee; Messrs. Crouse and McDonald, match committee. The membership fee for the year was set at $3.00 for men, and $1.50 for ladies and schoolboys.

Maple Sugar Industry Growing

Canada's maple sugar industry has now reached considerable proportions. The last census showed a total of 50,000 Canadian farmers or other maple grove owners in the business, with some 8,000,000 trees being tapped annually. Of this total, 85 per cent were in Quebec, 14 per cent in Ontario, and 1 per cent in the Maritime Provinces. Quebec accounts for three-fourths of the syrup produced in Canada. The total value of maple syrup products in 1930 was $5,250,620

STARLAND

A very enjoyable informal party was held at the home of Mr. and Mrs. R. A. McCullough on Wednesday, April 1st. Cards were played and prizes were awarded to the fortunate and unfortunate. A very enjoyable evening was spent with the usual lunch.

Mr. and Mrs. Robert Sargent entertained on Good Friday.

Easter service was held at the school on Sunday, a large crowd being in attendance.

On Saturday the meeting of the Junior U.F.A. was a great success, young and old attending. Forty members are now enrolled. Mr. R. McPherson and Mrs. I. Dunfield initiated the children in the mysteries and acts of voting, etc., and talked to them very interestingly. They had a very appreciative audience. Lunch was served, and a ball game wound up the afternoon's proceeding. "Starland" was the name chosen unanimously for this local. The next meeting is looked forward to very eagerly.

Mr. and Mrs. Barnett and daughter, Evelyn, spent their Easter holidays at Sextette.

Sentinel Hill Items

Miss Kathleen Newman spent the Easter holidays with her parents here, Major and Mrs. J. L. Newman.

Miss Robertson is spending her holidays at her home in Calgary.

Miss Margaret Simpson came home from Edmonton on Thursday, and is having her Easter vacation with her parents, Mr. and Mrs. W. Simpson.

The Junior U.F.A. of Starland is off to a good start, having with it the establishment of forty members of the younger set.

Mr. and Mrs. Barnett of Starland, went to Strither for the Easter holidays.

Mr. and Mrs. John Bisir were united the sad news of the death of a nephew in England recently.

Mrs. Cook, teacher of Sentinel Hill school, re-opened her school on Wednesday morning, following the Easter vacation.

Messrs. O. S. Herway, A. Carware, K. Foster and V. J. McNeil attended the Canadian Livestock Association meeting in Hanna on Tuesday, March 31.

Card of Thanks

[Under this heading are charged 50c per line, six words to the line, prepaid.]

Mrs. Louis Snowdahl and family desires to thank the many kind friends and neighbors for sympathy extended, and for floral tributes sent during their recent sad bereavement.

Hand Hill Echoes

Although the night was very cold on Friday, March 27th, a large crowd gathered at the Hand Hills schoolhouse, where the women put on their play, entitled "The Spinsters' Convention," which came off in good style, and was a great success. It was thoroughly appreciated by everyone, and all spent a most enjoyable time.

Billy Lindsay, son of Mr. and Mrs. Roy Lindsay, had the misfortune to be thrown from his horse while on the way to school a few days ago. He was taken to the Drumheller Hospital, where he remains under the care of Dr. Ross. Billy received an injury to his foot, and we all hope he will soon be home again.

Miss M. E. McFadden arrived home from Normal School, Calgary, on April 3rd, and is spending the holidays with her parents.

Mr. and Mr. R. B. Allen arrived home a short time ago, after spending the winter in Eastern Canada. They say that the winter was severe in the east than our part of Alberta, and claim that "Old Man Winter" has been very kind to us for the past five months.

Roy Milligan has arrived home for the holidays from Olds Agricultural School.

Everyone in the Hand Hills were busy a few days ago erecting mail boxes, and Rural Route No. 2 started April 2nd. We would have been unable to mention the start of this new mail route but for the energy of Mr. and Mrs. George Jones, who worked so hard for it, and to whom much thanks are due for getting it started. A rural mail route is something we have been waiting for some time, especially those living 10 to 15 miles from town. So let us give three cheers for Mr. and Mrs. Jones.

Mr. and Mrs. Orville Tabor and family moved from the Hand Hills a few days ago, and are now located about five miles west of Delia.

Mrs. Wm. Thomas and baby boy arrived home from the Drumheller Hospital a short time ago.

Eucharistic Congress Attracts Thousands

DUBLIN, March 31. — Dublin's population will be trebled the third week in June, when more than a million Roman Catholic pilgrims will visit the city for the International Eucharistic Congress. Fourteen Cardinals are expected. Nearly every country in the world will send large contingents, and 4,500 are expected from Belgium. Canada and the United States are preparing to send thousands to attend the Congress.

Intends Being a Newspaper Woman

The following appeared in the Calgary Albertan, Saturday, April 4, 1931. The editor and originator of this school paper is Patricia Boon, daughter of Mr. J. R. Boon, for several years weed inspector of this district. Patricia received her early education at Springwater School, north of town, and is only twelve years of age:—

"TWELVE YEAR OLDS PUBLISH NEWSPAPER

"An ambitious little team has been discovered at King George school, where the grade seven room prepared and issued a full-fledged newspaper, "The Challenger," complete with humorous and story sections. General news is followed by the editorial page, and finishes off the fun with personal and interesting. On pages where the news was scarce, the editor left blanks, which are probably as effective as the other method of filling in indiscriminately. The policy of these twelve-year olds would put to shame many of the numbers now afloat barks. Most unusual of all, perhaps, are the short stories by the young authors. One is fanciful about a country of "cookies and candy," bills of turkish delight and houses of nougat. Others are humorous, or deal with day to day happenings around. Advertising is very important, which shows that the young editor, Patricia Boon, has an eye for practical management. It is not the amateur type of newspaper though, employing its own artists, Jean Dempster, who has smoothed the paper with clever illustrations, fancy type and cartoons. The printer, or rather typist, is Doris Gabbot, who shows a distinct flair for effective layout. Credit is given to the first page to the teacher, Mr. Mackie John, but he apparently had nothing to do with the publishing, except the writing of the despot editorial. The editor says she is going to be a newspaper woman, and present signs indicate that her ability harmonizes with her age, she will be as outstanding success by the time she is grown up."

Improved Tone In Business Reports

It is reported that the provincial government of Ontario and the city of Toronto will undertake construction projects this month involving the expenditure of between $5,000,000 and $6,000,000 according to Canadian Press despatches. Approximately $20,000,000 of new building contracts were awarded during January, the lowest monthly total in the past two years. Nearly half was of an engineering nature, and building activity per cent was to business buildings.

The appearance of Spring and Summer orders are responsible for a slight improvement in business conditions during the past few weeks. Employment is gaining slowly, but the volume of Spring activity. In Quebec and the Maritimes shoe manufactures are fairly well occupied, at about 60 per cent of capacity, on Spring and Summer orders.

Retail-service business is fairly quiet in Ontario, but dealers expect an improvement later on in the month. Demand for rubber products, especially tires, has improved somewhat.

Staple foodstuffs are moving well in the Prairie Provinces. Demand along electrical lines in British Columbia is about normal.

Purchase Prize Beef for Hotels and Dining Cars

Those who eat in Canadian National Railways hotels and dining cars in the immediate future will be offered beef cuts from the Ring Brand, Canada's prize steer, as the decision by the Canadian National Railways to purchase a number of the prize-winning steers at the Brandon Winter Fair, which was a unanimous choice of the judges. Following the completion of the stock judging on Friday, the purchasing department of the railway placed the steers in most select places at the exhibition.

He is Just Away

I cannot say, I will not say
That he is dead; He is just away—
With a cheery smile and a wave of the hand
He has wandered into an unknown land,
And left us dreaming how very fair
It needs must be, since he lingers there.
And you—oh! you, who the wildest yearn
For the old-time step and the glad re-turn,
Think of him faring on, as dear
In the love of Those, as the love of thee;
Think of him still as the same, I say,
He is not dead—he is just away!

—James Whitcomb Riley

Argentina Will Compete In Grain Exhibition

Commission of Three Appointed to Take Care of Argentina's Entry to World's Grain Exhibition and Conference at Regina in 1932

The Argentina Republic will be a participant in the World's Grain Exhibition and Conference to be held at Regina in 1932.

News of the acceptance of Canada's invitation to participate in this great international grain exhibition and conference was made public shortly after Sir George Perley, representative of the Canadian Government, had arrived at the British Trade Exposition at Buenos Aires carrying with him an official communication to the Prince of Wales inviting His Royal Highness to officiate at the opening in 1932.

A special commission of three members of the Argentina Department of Agriculture has been appointed to take care of all details in connection with the participation of the Republic in the exhibition and conference, namely, the director of statistics, the director of disease prevention, and the director of trade and commerce.

Argentina is the sixteenth country to officially accept the invitation of the Canadian government to attend the World's Grain Exhibition and Conference at Regina in 1932. The complete list of participants at present is as follows: Great Britain, Australia, New Zealand, Czechoslovakia, The Netherlands, Belgium, Poland, Italy, Portugal, Switzerland, Estonia, The Philippine Islands and Argentina.

Agriculture is one of the chief industries of the Argentina Republic. Official figures recently issued for the 1928-1929 crop year showed nearly 30,000,000 acres cultivated to wheat, with a production in excesses of 300,000,000 bushels

OBITUARY

OLD-TIMER OF DELIA PASSES AWAY

On April 1st last there passed away at his home in New Westminister an old pioneer of the Delia district, in the person of Duncan Fletcher, at the age of 88 years.

Mr. Fletcher will be remembered by a host of friends in the district, he having settled south of the village in the year 1909, and lived an active life here until the year 1918, when he moved to Vancouver.

Mr. Fletcher was born in Obin, Scotland, in the year 1843, leaving there at the age of four years, when his family moved to Appin, Ontario. He came to Winnipeg before the railroad, in the early ox cart days, as was an early pioneer in the opening up of the west. He filed on land in the Portage district, which he proved up in 1883, before the Riel rebellion, and while there was associated in some of the early cattle deals with Pat Burns. He lived also at Nepawa, (Alberta), and finally settled in this district.

Mr. Fletcher was married twice, the second marriage being to Annie Gilmour in Minnedosa, who now survives him in Vancouver. By the first marriage he leaves four sons, namely his son Mr. Adam Fletcher of Vancouver, and Mrs. Katie Bowes of Edmonton. By the second marriage, John and Peter Fletcher, Mrs. Maggie Riddleston, Mrs. Agnes Crawford of Vancouver, Mr. Hugh Fletcher of Calgary, and Mr. Alex Fletcher of Delia. From the two unions there are twenty-nine grand-children, and three great grand children.

He passes one of the old-timers, at a ripe old age.

STONELAW NEWS

Fred. Curtin and Ed. Trickel were Delia visitors on Wednesday last, bringing home a load of grist from the mill.

Mr. and Mrs. Christianson and son, and Mr. and Mrs. Tom Hays and family were visitors at Mr. and Mrs. Fred. Curtin's on Sunday, March 29th.

The patients who have scarlet fever around Byemoor are recovering nicely.

Mrs. C. Kehe left for Penticton, B.C., on March 26th, to attend her parents golden wedding on April 3.

"The best thing for you to do," said the doctor, "is to give up smoking, to drink nothing but water at your meals, to avoid late hours.....and—Wait," reiterated the patient, "what's the next best thing?"

Tourist:—I hear that you have a remarkable echo here. Native:—Yes, sir, very remarkable. The people shout when they go to bed, and the echo wakes them in the morning.

NOTICE

We are now in a position to give you expert service on all makes of cars and tractors.

EARL WALKER, who has been employed for some time at the I.H.C. Service Station at Calgary, has come to us very highly recommended as an expert mechanic. He will be pleased to give you service on any make of car or tractor.

With the aid of our equipment and tools, we are able to save you time and money on your repair work.

OUR WORK IS GUARANTEED

King of Siam will have Staff of 50 on Canadian Trip

OTTAWA, April 4.—It will be interesting to the people of Canada to know that there probably was never any country which adopted as whole heartedly the principles of the Boy Scouts as did Siam, whose King and Queen will pay a visit to Canada on April 17. They will arrive on board the Empress of Japan and will return on August 23rd.

The King is coming to this continent to receive eye treatment, and a private train will carry the royal party from Vancouver to New York. The accommodation for the King and Queen, and their suite of fifty persons, on board that is estimated at $25,000. His Royal Highness, Prince Svasti, uncle of the King and father of the Queen, will accompany them.

King Prajadhipok ascended the throne in 1926, and has been responsible for placing Siam in an enviable financial position. At the time of his accession there had been a deficit for four years, but in the following two, without imposing any taxation on the people, he had cut the refaldeficas. This was accomplished by introducing economy in administration and drastic cuts in the expenses of the Royal Household.

Siam is situated between British Burma and French Indo China and has a population of about 10,000,000, two thirds Siamese. The principal city, Bangkok, has 600,000 residents; 2,000 of whom are Europeans. Agriculture and fishing are the principal occupations, while rice and teak are the main exports. Siam boasts a British financial adviser and a corps of Danish officers in charge of provincial police.

When Siam placed itself on the side of the Allies in the War, one of its contributions to fighting equipment was 500 trained aviators and a full equipment of airplanes, for service in the field. Each has been educated in the language for scientific subjects by the people.

The King is 37 years of age, and was educated in England. King Prajadhipok and his Queen, Rambai Barni, have no heir.

A Prospective Wheat Champion

A new prospective world's wheat and oat champion is looming out on the Canadian National Railways, and he happens to be a neighbor of the present champion, Herman Trelle of Wembley, in the Peace River district. The new prospective champion is Erich Andersen, who has only been in Canada for five years. In that time he has moved to the Peace River country, married a Canadian girl, farming methods and the art of producing championship seed grain. Already he has captured the Canadian championship for oat production, and the Alberta Provincial championship for wheat.

BIG SHIPPING INCR ASE

Over Sixty Per cent in Past Ten Years

According to a statement prepared by the Statistical Branch of the Department of National Revenue, shipping of all kinds entering and leaving Canadian ports during the fiscal year ended March 31, 1930, was 89,438,789 tons, a decrease compared with the previous year of 4,295,438 tons. Net tonnage of vessels entered and cleared coastwise was 87,734,773 tons, a decrease comparad with the previous year of 9,318,912 tons.

Sea-going shipping inwards and outwards for the last fiscal year was made up of 2234 British vessels, registered tonnage 30,171,383 tons; 18,148 Canadian vessels, registered tonnage 9,073,-916 tons; 19,929 foreign vessels, registered tonnage, 23,146,001 tons. Sea-going shipping entering and leaving via the St Lawrence River totalled 2,494 vessels, of a registered tonnage of 10,-926,930 tons.

Ports registering the largest number of seagoing vessels, entered and cleared, and with the largest tonnage for the fiscal year, 1929-30 were:—Vancouver, 4,808 vessels, 11,401,087 tons; Halifax, 3,383 vessels, 9,771,818 tons; Montreal, 3,821 vessels, 7,702,821 tons; Victoria, 4,481 vessels, 7,697,884 tons; Quebec, 979 vessels, 3,318,121 tons; St. John, 1,476 vessels, 3,291,786 tons; New Westminster, 833 vessels, 1,734,933 tons.

Foreign countries registering the largest number of sea-going vessels entered and cleared at Canadian ports for the last fiscal year were:—United States, 14,607 vessels, 19,267,784 tons; Norway, 1,911 vessels, 3,496,245 tons; Japan, 730 vessels, 3,150,136 tons; Germany, 594 vessels, 1,407,701 tons; Denmark, 397 vessels, 1,319,728 tons.

Fined for Possessing Still

DRUMHELLER, April 2 — Swede Olland, former in the Wintering Hills of Red Deer Valley, near Wayne, pleaded guilty to-day in illegal possession of a still and was sentenced to a fine of $200 and costs, or, in default, six months' imprisonment in Lethbride jail by Magistrate L. O'Connor on Wednesday. The home of Olland, which is situated between the hills in that district, was raided Tuesday night by Sgt. Clark, of Drumheller detachment, R.C.M.P., and Constable Thurston of the A.P.P. In an upstairs room the complete still was found, which the convicted man admitted as being his property.

Doris—"My dear, you should have seen her face." Joan:—"Why?" "Oh! the finest enough to make a cat laugh, and she will you I laughed till I nearly died."

Oh! Boy---Yo Yo

Where West Leads The East

General recognition is accorded to the fact that the West leads the East in grain and livestock production. It is known that the Western Provinces have a greater railway mileage per capita than the older settled provinces. It is an established and recognized fact that there are more rural telephones per capita in the West than in the East. It is not so well known that the West leads the East by a wide margin in the field of aviation. Yet such is the case as disclosed by the first annual report of Canadian Airways Limited, recently issued.

According to the report of this company, which is an amalgamation of all the large aviation companies in the Dominion, and in which the Canadian Pacific and Canadian National Railways are largely interested, the amount of air business done in the West far outstrips the volume of Eastern business, and that operating conditions in the West are more favorable with the result that there is less non-productive flying and consequently greater profits here than in the East.

The figures given in this report will prove most illuminating and interesting to western people. They cover twelve months operation of the Eastern lines, and thirteen months operation of the Western lines. It is shown, for example, that the total mileage flown in the East was 754,199 miles, as compared with 1,213,925 miles in the West. Total flying hours in the East were 7,856, but with the Western total 14,317, or almost twice as great.

But it is when one comes to a consideration of the amount and value of the business transacted, and the efficiency in operation, that the ascendency of the West over the East in flying is most strikingly illustrated. Mail and express for carried over Eastern lines amounted to 126,430 pounds, while the corresponding figure for Western lines was 207,483 pounds. Freight and express carried on the mail 'planes in the East was greater than in the West, being 14,971 pounds as compared with 9,000 pounds. But freight and express carried on other than mail 'planes tell an entirely different story and reveal the extent to which this form of transportation has been developed in the West. No less than 404,010 pounds of package freight and express was transported by air in the West during the 13,151 pounds in the East. In other words, the East has not developed this department of air service, apart from the regular mail 'planes, to anything like the extent that has been done in the West.

In passenger traffic, both on mail 'planes and other aerial services, an even more surprising record has been established by the West, showing that our people are becoming air-minded. The number of passengers carried on mail 'planes in the East was 299, and in the West 3,246; on 'planes other than the mail 'planes, 1,447 Eastern people travelled by the air route, while in the West 3,806 chose the same method. Considering the much larger population of the East the fact that 2,507 more persons travelled by air as compared with 1,746 in the East speaks eloquently for this Western country.

This Western predominance in the air has no doubt partly accounted for the fact that the West is now regarded as an ideal country for flying operations, and also because of the further fact that distances between points to be reached are much greater in the West than in the East. That the West is well adapted to flying is demonstrated by the figures of mail efficiency contained in the report under review in this article. Out of a scheduled or possible mileage in Eastern Canada of 67,084 miles, only 66,448 miles were actually flown, leaving a lost mileage of 118,770, or only 82.4 per cent of efficiency. In the West, on the other hand, out of a scheduled or possible mileage of 764,578, productive mileage flown totalled no less than 706,544, leaving only 56,034 miles lost and representing an operating efficiency of 92.7 per cent.

The lighted airways of the West, making night flying practicable and safe, and the very few municipal airports now in existence, but rapidly improved, coupled with the excellence of flying conditions in general throughout the prairie country, provide an assurance that air transportation will more and more prove an important factor in the life of Western Canada, and in all probability a greater factor here than in the older sections of the Dominion.

Sees Ray Of Hope

Believes Country Will Be On Sounder Basis Within Five Years

Faith in the west, and assurance that in five years the country would be on a sounder basis than ever, were the main points of an address delivered by J. A. Caulder, president of the Dairy Corporation of Canada, before a Toronto Service Club recently.

Speculative spirit fostered by better days in the west had had its effect on gambling losses there, equally as it had in the east, the speaker said. Diversified farming was more widespread, he said, as indicated by the increased butter production in the west.

Grading Canadian Potatoes

The Food Vegetables Act of Canada provides that potatoes must be put up by grade—Canada No. 1; Canada No. 2, and Canada Seed—and that on each bag, barrel or other container must be marked, by tag or stencil, the initials of the inspector name and full surname and address of the person, firm or corporation offering the potatoes for sale.

Just As Dangerous

Mother was poking about in the shrubs when she suddenly called out: "Look, Junior! Here's a little green snake!"

"You better look out," cautioned Junior. "It may be just as dangerous as a ripe one."

Made Fast Crossing

C.P.R. Liner "Empress Of Canada" Makes Good Time From Yokohama To Victoria In 9 Days 17hrs. 8Min.

Crossing the Pacific from Yokohama in 9 days, 7 hours and 51 minutes, the new addition to the Empire liner "Empress of Canada" docked at Victoria recently. This time is 3 hours and 2 minutes faster than the "Canada" made on her maiden voyage from Yokohama to Victoria in 1922.

The R.M.S. Empress of Japan, of the same fleet, however, holds the speed record, for a Pacific crossing, having made the voyage between Yokohama and Victoria, in February, in 8 days, 3 hours and 12 minutes.

Asthma Can Be Cured. Its suffering is so needless as it is terrible to endure. After its many years of research the most stubborn cases no sufferer can doubt the perfect effectiveness of Dr. J. D. Kellogg's Asthma Remedy. Comfort of body and peace of mind return with its use and nights of sound sleep come back for good. Ask your druggist; he can supply you.

Pineapples From Fiji Islands

The market news letter of the British Columbia Department of Agriculture notes the arrival of a heavy shipment of canned pineapples from Fiji Islands, packed in boxes which came from Victoria and in tins cans and tin plate from Vancouver.

Australia's apple crop this year is estimated at 7,000,000 bushels.

Smothering and Fainting Spells

Everything Would Turn Black

Mrs. Andrew Black, Harcourt, N.B., writes:—"I had been troubled with smothering and fainting spells and everything in front of me would turn black, and I would fall down in a faint and be unconscious for several minutes. I did not know what to do, until one day I was reading where Milburn's Heart and Nerve Pills had helped so many people and decided I would give them a trial. I used four boxes and found they help me wonderfully."

MILBURN'S HEART AND NERVE PILLS

Price 50c a box

Sold at all drug and general stores, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Canada Well Advertised

Descriptive Booklet Was Distributed At Buenos Aires Exhibition

Canada was well advertised at the Buenos Aires exhibition in the Argentine Republic, fifty thousand copies of an artistically-designed booklet descriptive of this country having been sent to the exhibition for distribution. The booklet is written in Spanish and so is the wording on a series of beautiful pictorial blotters that were distributed with it.

The publicity branch of the Department of Trade and Commerce produced the booklet, which is of a quality reflecting credit upon the publicity director, H. E. M. Chisholm. The author does not forget to tell his South American readers that Canadians invented the telephone, originated the idea of standard time, built the first submarine telegraph, made the first electric stove, discovered insulin and did other remarkable things. Many of our own citizens would profit from reading what the blotter has to say about our form and political record, nor national resources and the characteristic features of the country."—*Toronto Star.*

Novel Christening

Cracked Ice Is Used To Christen Submarine That Will Cross Arctic Ocean

They used cracked ice to christen the "Nautilus," the reconditioned submarine which Sir Hubert Wilkins plans to cross the Arctic Ocean this summer.

The cracked ice was contained in a small silver barrel perched on the prow of the vessel. Lady Wilkins yanked a string, and the barrel disappeared in emptying fragments. Sentiments—symbolic because the "Nautilus" will attempt to cross the top of the world under the floes, coming up here and again for air and observations.

Acids In Stomach Cause Indigestion

Medical authorities state that nearly all cases of the pain, sour stomach, trouble, indigestion, sourness, burning, gas, heartburn, etc., are due to an excess of hydrochloric acid in the stomach. Instantly relief comes when this irritating poison is delayed or neutralized, causing the disagreeable symptoms to vanish. Any druggist sells Bisurated Magnesia and take in water as directed. This excellent antacid relieves the stomach, prevents the formation of excess acid, and thus the cause disappears. Be sure to get Bisurated Magnesia (powder or tablet form—never liquid or milk) as it is best for the stomach, harmless to take and is the most efficient form of Magnesia for indigestion, and is used by thousands of people who suffer from distress after eating or from acid stomach.

The Issue In India

Retired Official Gives His Opinion Of the Situation

"I have been in India 46 years and have no hesitation in saying that most of our troubles are due to the fact that in the past, politicians failed to think out the results of their actions to their logical conclusion," said Field Marshal Sir William Birdwood, who has just retired as commander-in-chief in India, in a speech to the London Devonian Society, England.

"I hope that whatever government in India may will remember that the masses of India are illiterate and inarticulate and will see that the safeguards we now have will be retained upgrades and that those people will not be handed over to the intelligentsia who speak in the name of India without having the same affection for the cultivators of the land as we English people have," the field-marshal added.

University Of Alberta

Increases In Registration Of All Departments Is Noted For Current Year

A general analysis of registration at the university of Alberta compiled by the registrar shows increases in practically every department, the total of 1,784 being 226 higher than in 1930. The largest categories this year are: Arts and Applied Sciences, 718 and 268 respectively. Medicine, including dentistry and nursing, 323, and Agriculture, 222.

The Family Physician.—The good doctor is always worth his fee. But it is not always possible to get a doctor just when you want him. In such cases, common sense suggests the use of reliable home remedies, such as Dr. Thomas' Eclectric Oil, which is wonderfully effective in relieving inflammatory pains and healing cuts, scratches, bruises and sprains. The presence of this remedy in the family medicine chest saves many a fee.

A Secret Expedition

A. James Taylor, only Canadian to accompany Byrd on his Antarctic expedition, has arrived at Vancouver from White Horse, Yukon, to admit that he is soon to join another expedition of exploration which, however, he declared he had been ordered not to reveal. The expedition thought out, he stated, is to be conducted in secrecy. Formerly a member of the R.C.M.P., he had charge of all the huskies with Byrd.

A herd of starving deer in Alaska, was recently fed by bales of hay dropped from airplanes, very much like manna from above.

PAINS

No matter how severe, you can relieve any pain with immediate relief!

BAYER

Aspirin always stops pain quickly. It does it without any ill effects. Harmless to the heart; harmless to anybody. But it always brings relief. Why suffer?

Women Of Quebec Voted Century Ago

Privilege Later Taken Away By Act of Parliament

More than a hundred years ago French-Canadian women in Quebec had the right to, and did, vote in the government of Canada, Mr. Justice Riddell told members of the Women's Law Association, at Toronto. According to the Canada Act of 1791, "persons" who possessed such and such property were entitled to vote for the first legislative assemblies, and French-Canadian women claimed that they were persons, just as did the women of a year ago when the wording right to, and did, vote in the senate, the Justice pointed out.

The women of Quebec accordingly voted in 1792 in the first election and, when the matter came up in the House an act was passed preventing women voting. It never became active, for the act contained a clause which was considered objectionable by the British administration, which at that time passed laws disallowing acts, and the Canadian act was cancelled. The matter was allowed to rest, and it is only the legislature of Canada passed an act stating that the voter must be male.

Expect Heavy Exports Of Canadian Cattle

Greatly Increased Market In Old Country Predicted

Cattle exporters and those in close touch with the cattle-raising industry in Ontario and the West, estimate that at least between 15,000 and 20,000 head of cattle will be exported to Britain this summer.

Some optimists think Canada will have much more than 20,000 head to export, one estimating as high as 100,000, but in view of the heavy shipments during the past few years, it would be generally considered improbable. In 1925, this country shipped 110,668 head to Britain, and since then the shipments dropped off steadily to very small proportions. The British embargo against Canadian cattle was lifted in 1923.

In 1932 it will be possible to ship cattle from the port of Churchill and there is support of that port in this, while still greatly lower the costs for cattle on the prairies.

Winnipeg Real Estate

Comparatively Small Number Of Houses and Stores Found To Be Vacant

The Winnipeg Real Estate Board reports the following from its annual survey covering the year 1930: A total of 35,333 houses with only 1.6 per cent. vacancies; a total of 107, 114 apartments with 10 per cent. vacancies (this includes suites in apartments under construction at time of survey); these apartments in 1931 have only been very slightly lower in four instances. New houses constructed in 1930 total 520. New apartment blocks constructed in 1930 total 16, having 266 suites. In house construction this total has only been exceeded three times in the same period.

A Beggar's Blessing

"You don't happen to have a cup of nice hot coffee on you, Father?" asked a pan-handler of a citizen on King Street, Toronto, and the expression of gratitude when the wherewithal was produced was touching to behold by original. "God bless your specs," he said heartily, "and keep 'em rose-colored."

Alberta Egg Production

Alberta shipped 115 cars of eggs eastward in 1931, according to R. E. Emsimore, federal egg inspector, who added that the months of January and February this year had apparently been record ones in egg production.

There are now a total of 5,700 grain storage elevators in Canada, with a combined capacity of nearly 400,000,000 bushels.

MINARD'S "KING OF PAIN" LINIMENT

W. N. U. 1884

Canadian Schoolboys Are Good Marksmen

Win King's Trophy In Empire Competition Twice In Succession

Canada's schoolboy marksmen for the second time in succession have won the King's trophy in the Empire competition held under the auspices of the National Rifle Association. The Canadian lads showed marked superiority over all other competitors with a record score of 86.96 points.

In second place was South Africa with 83.85, while Britain was third with 68.85.

Fourth place was taken by New Zealand with a score of 63.16.

With 380, Canada also netted the biggest bag of silver and bronze medals awarded for individual scores of 97 and over. South Africa came next with 109 while Britain secured 68.

The Dominion also monopolized the first three places in the shoot for the Junior Imperial Challenge Shield, and Calgary public schools third with 85.4. First and second were won by the east.

DRAPERIES MADE NEW

"When we resumed housekeeping a month ago I found my draperies had become creased from packing. I hung them out on the line, hoping the creases would vanish. Then I forgot them. The result was they became faded and sun-spotted.

"I was heartsick until the happy thought struck me to dye them. I had dyed them a deeper green, and as I used Diamond Dyes they look gorgeous and new. They have been easier dyes to use than Diamond Dyes, for the latter are fast only to colors—when used either for tinting or dyeing—and never take the life out of cloth as other dyes do."

Mrs. J. F. T., Montreal.

Recipes For This Week

(By Betty Barclay)

ORANGE SPONGE CAKE

2 egg yolks
4 tablespoons orange juice.
½ tablespoon lemon juice.
¾ cup sugar.
1 teaspoon grated orange rind.
2 egg whites.
1 cup flour.
½ teaspoon soda.

Beat egg yolks with orange and lemon juice until thick and yellow; mix sugar and grated orange rind, and add gradually to egg mixture. Stiffly-beaten egg whites, and cut and fold in flour, sifted four times with soda. Pour into a buttered and floured cake pan, and bake in a moderate oven about forty minutes.

COTTAGE CHEESE PIE

Line a deep pie plate with pie crust and add the following mixed together in the order given:

3 well-beaten eggs.
1 cup cottage cheese.
1 cup shredded cocoanut.
6 tablespoons sugar.
1 teaspoon nutmeg.
2 cups milk or enough to fill the pie plate.

Bake as you would custard pie, being careful to reduce the heat to insure a firm consistency.

World's Grain Show

Philippine Islands To Have Exhibit At Big Show To Be Held In Regina

The Philippine Islands are to exhibit at the forthcoming World's Grain Exhibition and Conference at Regina, in the summer of 1932, both in the competitive classes and in the educational exhibit section. The unit in charge of these displays will be the College of Agriculture, of the University of the Philippines, under B. M. Gongalez, dean of the college, and Prof. N. B. Mandiola, of the Department of Agronomy, supervising.

For Four Generations

When Dr. McCowan resigned recently from the staff of Glasgow Royal Infirmary, at Glasgow, Scotland, it broke an association of 134 years of the McCowan family and the hospital. Four generations, grandfather, grandfather, and his father having served there.

With so thorough a preparation at hand as Miller's Worm Powders, the mother will seldom see her children to suffer from the ravages of worms in the stomach, usually caused when a child subjected to the attacks of worms is always unhealthy, and will be stunted in its growth. It is a powerful aid to rid it of these destructive parasites, especially when it can be done without difficulty.

Cranes Publication

After 103 years of publication, the Athenaeum Magazine is disappearing from London news-stands through a merger with the New Statesman and Nation. The new magazine will be committed to no political policy, its sponsors say.

Horses Sold To Packing Plants

In a report to the British Columbia Legislature, Hon. W. A. Atkinson, Minister of Agriculture, mentioned that over 2,000 wild horses, owned mostly by Indians, had been sold to horsemeat plants in 1930.

Historic Harp Found

Instrument Belonged To Thomas Moore, Famous Irish Poet

The harp that once belonged to Thomas Moore, Irish poet, has been found in an obscure corner of the museum of Drexel Institute, at Philadelphia.

Green and covered with gilt shamrocks, the harp was an enigma to museum attendants until it was learned that George W. Childs, former newspaper publisher, had bought it from Moore's family years ago and subsequently gave it to the museum. It was found during a rearrangement of exhibits.

No harp ever made for the Royal Family is as important, it was suggested here, as the instrument crowned by the author of "The Harp That Once Through Tara's Halls." Moore was born in Dublin, Ireland, in 1779.

Fast Air Service Foreseen

Thirty-Hour Journey From Coast To Coast Predicted

Aerial transportation service providing a 30-hour journey from coast to coast was foreseen for the near future by J. A. Wilson, controller of civil aviation in the department of national defence, Ottawa, in addressing an aeronautics meeting at the University of Toronto. The speed of aircraft would be stabilized at between 120 and 140 miles an hour, Mr. Wilson thought.

Radio beacon systems which will enable an aeroplane pilot, by consulting an instrument, on his control panel, to tell whether he is deviating from his course, are being installed on Canada's main air mail and established commercial routes, it was stated by Lieutenant-Colonel W. Arthur Steele, Ottawa, chief of the radio division of the Canadian Signal Corps.

Construct Creamery Plant

The construction of a creamery plant at Westview, Powell River, B.C., is planned by the Comox Creamery Association.

Wife: You're the most self-centred man I've ever known. Always thinking of yourself.

Husband (wearily): Dear me! Wife: There, didn't I tell you?

The elk's favorite weapon, his forefoot, is so powerful that a single blow has been known to break the back of a gray wolf.

"What's the worst thing a married man can do?"

"Well, to be frank——"

"I guess you're right."

He who will learn of none but himself hath a fool for a master.

Air Pilots Discover Secrets

Linking Up Disjointed Story Of Roman Rule In Britain

Britain is yielding her secrets to pilots of the air.

For four centuries, Imperial Rome held Britain under sway. Agricola carried her eagles over the Tyne right into the Grampians. Across the stretch between Tyne and Solway, she threw 4 line of small forts as a barrier against the wild tribes of Caledonia. Hadrian came and the defences of Agricola became the great Roman wall which can be traced for nine miles over hill and dale of the English northland.

For years, antiquarians have excavated and discoursed learnedly on the precise meaning of this or that curve in a ditch, or the significance of a few letters on a broken tile. Now the Royal Air Force has entered the field. It has made a photographic survey of Hadrian's wall from the air. It has discovered four temporary camps which were revealed. It has added to knowledge of both military and civil stations along the wall.

The legions of Rome came and went, leaving little beyond a road system that had fallen into decay; but the camps that have lasted almost disappeared, and memory of a power that was. Yet by air photographs and excavation, the disjointed story of Rome in Britain is again linking together. And in all the dramatic history of these islands, there is nothing stranger than this: that Britain's airmen should reveal where Rome once planted her eagles, where a Roman sentry once looked southward towards the conquered province of Britain.

The Present Era

Our Age May Be Known As the Period Of Greatest War In History

How will the present age be known to posterity? There is reason for suspecting that it will not be recorded as the age of the radio primarily, nor as the age of the automobile, nor as the period of the second industrial revolution. The belief is warranted that our age will be known as the period of reconstruction after the greatest war in history. Boast as we may about achievements, the World War set the problems of the world's present period and placed its stigma upon our time. It marked the close of one epoch and the beginning of another. Our lives are set against a background of large scale reconstruction.—Minneapolis Journal.

The deepest mine ever dug is about 7,900 feet deep, or one three-thousandth of the distance from the earth's surface to its centre.

Keep Foods Deliciously Fresh

Keep your foods—cakes, bread, pies, cut meats, etc. —under a covering of Para-Sani Heavy Waxed Paper. You'll be amazed at the length of time they'll stay *fresh—delicious!* Para-Sani keeps them fresh, sealing. Get Para-Sani in the handy, sanitary knife-edged carton. Ontario Labor Party Refuses To Recognize Soviet Russia Idealism

London, Ont.—After two hours bitter debate, Labor Party, of Ontario, in convention, refused to recognize Soviet Russia as an ideal to be followed by the labor movement in Canada. By a vote of 33 to 25, an amendment was carried, deleting the clause: "The Labor Party recognizes Russia is endeavoring to establish a Socialist Republic, and in at this time making a valuable contribution to Socialist thought and ideology," from a resolution before the convention.

From the same resolution, another paragraph repudiating Tom Moore, president of the Trades and Labor Congress of Canada, for endorsing the government's stand on Soviet trade relations, was also deleted. Delegates to the convention had a reception of Mr. Moore, declaring it was not in the interest of the Labor Party to antagonize labor groups or the country by criticism of their leaders.

Speaking in support of the amendment motion, James McInnes, M.P. Vancouver, said the general principles which are recognized to exist between nations were at stake, "aside from the commercial value to Canada of trading with Russia." While Canadians might not like the way things are done in Russia, "we may also dislike the way things are done in Italy or some other countries. Yet that is no adequate reason for shutting them out," he declared.

The convention went on record as favoring an eight-hour day and five-day week. A recommendation which would have set up the six-hour day was defeated. Controller James Simpson, Toronto, speaking against the resolution, said: "The eight-hour day may not be our ideal, but we cannot reach our objective in one jump. The six-hour day will make a contribution to the relief of unemployment, and we have a chance of getting such legislation enacted."

A resolution which would have referendums taken on the liquor question whenever petitions signed by 35 per cent. of the electors voting for such a vote was presented to the government, was turned down by the convention. Although the resolution was dismissed, it was indicated it may be reintroduced again.

The convention was unanimously in favor of unemployment insurance and did not debate the question. A resolution adopted requested the government to provide for unemployment insurance so that the workers of the Dominion shall be provided for at all times and thus abolish all fear of semi-starvation."

The present any further suppression of free speech," an amendment to the Criminal Code will be sought, the "free speech" resolution was mentioned briefly in a general resolution regarding bills for health insurance, unemployment insurance, and the Criminal Code amendment.

Amendments to the Minimum Wage Act, to extend the regulations to cover more office female workers, will also be asked by the party.

Liquor Probe

No Report Yet Received In Connection With Montreal Investigation

Ottawa, Ont.—No report has been received by the Minister of National Revenue, Hon. H. H. Stevens, in connection with the investigation being conducted in Montreal into the operations of an alleged smuggling ring.

Departmental officials recently confirmed that a commissioner had been pursuing queries for the past few days, in consequence of information that had come into the possession of the preventive service. The short circuiting of liquor from St. Pierre and Miquelon back to Canada, the original exporting country, was the condition which the commissioner was probing.

Until a report is received officials of the department decline to comment.

Opening Of Navigation

Kingston, Ont.—The steamer "Barrie," of the Canada Steamship Lines, under the command of Captain J. H. Ganiche, captured the honor of being the first lake steamer to clear from her winter berth at Kingston on Monday to open the season of navigation between Kingston and other lake ports.

Will Visit Canada

Washington, D.C. — Sir Ronald Lindsay, the British ambassador will visit Canada during the latter part of April it is expected Sir Ronald, paying his first semi-official visit to the Dominion, will leave Washington about April 28, to go on to Ottawa, Toronto and Montreal.

Meetings of workers in the iron and steel industry of England now average $12.99 a week.

Immigration Restricted

Government Policy Has Helped To Solve Unemployment Problem

Ottawa, Ont.—The government's policy of restricted immigration has materially helped to solve the unemployment problem in the last six months, and has reduced the number of arrivals of new citizens by 53 per cent. over the corresponding period of the previous year, according to Hon. W. A. Gordon, Minister of Immigration and Colonization.

He also pointed out that in the first 11 months of the last fiscal year, 28,725 young Canadian men and women were received out of the United States, and returned to Canada.

For 11 months of the fiscal year which ended Tuesday, March 31st, 48,830 persons entered the Dominion, as compared with 166,712 in the corresponding period of the previous year.

Total number of jobless men placed on farms by the Land Settlement branch of the immigration department, numbered 2,500 to the end of February, 1931.

Will Seek Information

Members Of Co-Operative Wholesale Society Of Great Britain Are Here As Observers

Toronto.—"We are merely in Canada as observers and have no opinions," said George W. Brooks, a director of the Co-Operative Wholesale Society of Great Britain, when interviewed by the press.

However, he provided details of the organization's activities, stating that affiliated societies and 4,020,332 co-operative customers. The company's sales during the half-hour day totalled $500,000, while in the year ending July, 1930, they amounted to $250,000,000. Butter holds first place in sales, followed by sugar, boots, tea and tobacco, and tea.

Profits for the year 1930 amounted to $6,500,000. In addition to this the organization purchased $9,000,000 worth of grain from the Manitoba Wheat Pool.

There have been reports that the society contemplated establishing a branch in Canada.

Was Secretary To Royalty

Lord Stamfordham Passes Away At London, England.—Lord Stamfordham, secretary to royalty for the past 30 years and said to have possessed more influence than any other man, died recently. He was 81 years old.

Sure Arthur Bigge, the son of a country vicar, Lord Stamfordham was private secretary to Queen Victoria and at the time of his death was private secretary to the King. He was often referred to as "the man behind the throne."

On March 13, Lord Stamfordham underwent an operation but this resulted in little improvement in his condition.

The private secretary is survived by two daughters, the Hon. Mrs. Victoria Eugenia Adeane, and the Hon. Mrs. Margaret Bigge. Lady Stamfordham died in 1922.

Will Buy More Wheat

Wrigley Company Has Practically Decided To Continue Purchase Policy

Toronto, Ont.—William Wrigley Company, Limited, has practically decided to extend, for the balance of the year, its policy of purchasing Canadian wheat crop, with all of the profits derived from the sale of products in the provinces of Manitoba, Alberta, and Saskatchewan, said J. Allan Ross, president of the company.

The Wrigley wheat investment fund inaugurated on December 15, 1930, was due to expire on May 1 next. The original plan was to purchase up to 1,000,000 bushels of Canadian wheat in the period stated. The extended plan to cover the full calendar year still retains 60 cents per bushel as the maximum price to be paid, as in the original scheme.

It was estimated, said Mr. Ross, that an additional 7,000,000 bushels of wheat would be accumulated under the revised plan.

Want Health Probe

Urge Public Health Inquiry In Province Of Manitoba

Winnipeg, Man.—Inquiry by a special select committee of the Manitoba legislature into matters of public health in the province was urged in the House recently by J. W. Pratt, Independent member for Birtle. His probe request was supported by Dr. Murdock MacKay, Liberal, Springfield, and J. B. Laughlin, Conservative, Killarney. The question of state medical aid would have to be considered by the government within a short time, Dr. MacKay believed.

Winners In Writing Contest

Novel By Calgary Girl Carried Off Third Price

Montreal.—A Dominion-wide contest in novel writing came to an end with the announcement that Raymond Knister, of Port Dover, Ontario, has been awarded first prize of $2,500 for his winning manuscript. The book will be published by the sponsors of the contest, an Ottawa publishing company.

Second prize of $1,500 went to Marcus Adney, of Toronto, and Ella B. Watts, of Calgary, won the third prize of $1,000. All three books will be published in the near future.

Several manuscripts were thought to be of such merit that the contest judges recommend that they be published later. Included in this latter group were books by Laura Goodman Salverson, Port Arthur, Ontario; Francis Dean, Edmonton; and Isabel E. Henderson, Winnipeg.

The object of the contest was to demonstrate to Canadian readers that 100 per cent. Canadian books rank as high as those published anywhere, and that there are many potential authors in the Dominion.

LAY PLANS FOR MARKETING OF THE WHEAT CROP

Rome, Italy.—The first steps were taken towards the orderly marketing of the world's next wheat crop, representatives of Canada, Argentine, Australia, Bulgaria, Hungary, India, Poland, Rumania, the Soviet Union and Yugo-Slavia met to discuss preliminaries to the summoning of a formal conference where, it is hoped, a definite agreement will be reached for the sale of the 1931-32 crop.

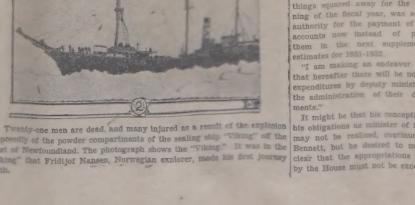
It was upon the motion of Hon. G. Howard Ferguson, Canada's high commissioner in London, England, and the Dominion's chief delegate at the conference, that the production committee adopted the suggestion for a later conference to deal with marketing the crop which is to come. The suggestion was read, "That this conference, recognizing the importance of orderly marketing of the export surpluses of wheat and having considered the present low price of wheat on the world's markets is a serious factor in the present economic situation, is of the opinion that it is desirable that delegates of countries exporting wheat should together with the question as possible organize on an international basis the operation of the crop of the year 1931-32."

The motion concluded by suggesting that the United States also be invited to take part in the discussion. It was pointed out that the delegates should be held in Canada early next summer.

The proposed conference covers a broader field than was originally suggested. As the work of the present wheat conference has proceeded so many points of opinion have been revealed that anything like a general agreement among the 46 nations represented to be likely is improbable. The gulf between the overseas countries and the European wheat-exporting countries seems to widen.

The Danubian countries again sought tariff preferences in Europe for their wheat. But to this such one objection was again made and proposals involving rationing of production met with like objections. The overseas exporting countries discussed orderly marketing, apart from the conference proper, but reached so much success that approaches were made to the Dominion countries. They agreed to join a conference to be held next year. The Soviet delegation did likewise, making their agreement, however, conditional on the approval of the Soviet Government.

Then came the formal motion in the wheat production committee by Canada's chief delegate. The committee approved the motion and representatives of all the producing countries concerned met to discuss preliminaries.



SEALING VESSEL EXPLOSION

Twenty-one men are dead, and many injured as a result of the explosion supposedly of the powder compartments of the sealing ship "Viking" off the coast of Newfoundland. The photograph shows the "Viking" at left, the "Viking" that Fridtjof Nansen, Norwegian explorer, made his first journey north.

MINISTER TO CUBA

Sir John Joyce Broderick, newly appointed British minister to Cuba, photographed when he sailed from New York for England, where he will enjoy a short vacation before taking up his new duties. He was formerly attached to the British embassy in Washington. He sailed March 14.—Associated Press Photo.

Reports Say Ottawa Plans Domestic Loan

To Cover Obligations Maturing Within Two and a Half Years

Ottawa, Ont.—While there are many rumors of government financing to provide for large maturities within the next two years, no decision as to the method for the sale of the 1931-32 crop.

It was upon the motion of Hon. G. Howard Ferguson, Canada's high commissioner in London, England, and the Dominion's chief delegate at the conference, that the production committee adopted the suggestion for a later conference to deal with marketing the crop which is to come. The suggestion was read, "That this conference, recognizing the importance of orderly marketing of the export surpluses of wheat and having considered the present low price of wheat on the world's markets is a serious factor in the present economic situation, is of the opinion that it is desirable that delegates of countries exporting wheat should together with the question as possible organize on an international basis the operation of the crop of the year 1931-32."

The motion concluded by suggesting that the United States also be invited to take part in the discussion. It was pointed out that the delegates should be held in Canada early next summer.

The proposed conference covers a broader field than was originally suggested. As the work of the present wheat conference has proceeded so many points of opinion have been revealed that anything like a general agreement among the 46 nations represented to be likely is improbable. The gulf between the overseas countries and the European wheat-exporting countries seems to widen.

The Danubian countries again sought tariff preferences in Europe for their wheat. But to this such one objection was again made and proposals involving rationing of production met with like objections. The overseas exporting countries discussed orderly marketing, apart from the conference proper, but reached so much success that approaches were made to the Dominion countries. They agreed to join a conference to be held next year. The Soviet delegation did likewise, making their agreement, however, conditional on the approval of the Soviet Government.

Then came the formal motion in the wheat production committee by Canada's chief delegate. The committee approved the motion and representatives of all the producing countries concerned met to discuss preliminaries.

Wheat Stocks Less

Visible Wheat Supply Shows Big Decrease Over Last Year

Winnipeg, Man.—Decreasing supply of Canadian visible wheat was down over a month to 183,680,887 bushels—more than 12,000,000 less than jammed elevators of North America held a year ago. According to a report issued by E. A. Ursell, statistician to the Board of Grain Commissioners, stocks declined 2,125,966 bushels during the week ended March 27.

Ocean shipments of Canadian wheat fell off slightly, totalling 2,006,482 as compared with 3,737,909 bushels for the previous week. Notably, the clearance decrease was at United States ports on the Atlantic, where shipments totalled only 977,000 bushels. From Canadian Pacific ports shipments were 1,029,482 bushels. Clearances from Canadian Atlantic ports were 531,000 bushels.

Would Replace U.S. Grain

Ontario's Grain Requirements May Be Supplied From Canada

Toronto, Ont.—Western Canada grains will replace those imported from the United States for use in Ontario distilleries in planned fashion this year, following investigation now being made by the Department of Agriculture, Hon. Col. Thomas Kennedy. The expected legislation will probably bind grain pools, elevators and feeders of the province in a co-operative arrangement.

Money Awaits Court Ruling

London, England.—Sums of money which do not pass from one hand to another, pending a ruling by the British home office on what disposition to make of the currency. The sweepstake is not legal here.

U.S. Airplane Crash

Knute Rockne, Notre Dame Football Coach, Is Killed

Bazaar, Kas.—Knute Rockne, Notre Dame football genius, plunged to his death with five fellow-passengers and two pilots on a Transcontinental and Western Air Inc. air liner in the mid-Kansas grazing country near here.

The plane California-bound from Kansas City, crashed on a farm, killing all eight occupants and a newsboy. Witnesses said the craft, flying through clouds and fog lost a wing in the air and hurtled to the ground like a crippled bird.

The body of Rockne was identified by W. L. Wham, son of William Allen White, of the Emporia Gazette. The famous coach boarded the plane just before its departure from Kansas City, in mist and rain, at 9:15 a.m. He was bound for Hollywood to complete arrangements for making talking pictures.

British Financier Has Sailed For Canada

Will Head Inquiry Into Grain Marketing In Dominion

London, Eng.—Sir Josiah Stamp, great economist and financier, has sailed for Canada to head the inquiry into grain marketing in the Dominion. He expects to remain in Canada until the early part of May.

"I am going partly for an Easter holiday," Sir Josiah told the Canadian Press before leaving London, "and partly because I am a member of the Canadian prime minister and government to assist them with advice concerning wheat quotations."

WILL MAINTAIN CLOSE CHECK ON EXPENDITURES

Ottawa, Ont.—"Every department will have the strictest supervision; if not, then some gentleman are going to lose their positions," declared the prime minister in the House of Commons, in reply to a question as to the line of supply considering supplementary estimates and had under examination an appropriation amounting to "505,510.46 to cover unprovided items 1929-1930," as per auditor-general's report. The item finally passed.

Mr. Bennett traced the growth of this annual amount, and asserted that if parliamentary control over appropriations was to be maintained, then discipline must be applied or the whole system would fall because the amounts covered by the item had already been paid, and all that was before the committee was to legalize expenditures and begin the new fiscal year on April 1 with a clean sheet.

"I agree with the prime minister as to the Farm Loan Board," said Mr. Chevrier, "but the prime minister should recall that he (Mr. Bennett) had had this for eight months of the present fiscal year. The previous administration had had only four months. In view of that the responsibility for the over-expenditures lay with the government. The items, which had appeared regularly every year, were due, not to overpayment, but to unforeseen circumstances, which did not imply negligence on the part of anyone.

The question of whether the committee had the power to refer to before or after the payment of accounts was raised, the prime minister contending that this office was to check the accuracy of the amounts and the authority for the expenditures. The money, he said, was paid after the auditor-general had a chance. Hon. Charles Stewart (Liberal, Edmonton West), declared that the prime minister would find it the most difficult thing in the world to close out accounts at the end of the fiscal year.

Mr. King recalled that in 1921-1922 the outgoing Conservative government had left an amount of $2,000,630.86 to be accounted for in the corresponding item for that year. Compared with the sum now under consideration it could be seen, he said, how the last administration had exercised care and caution. The prime minister observed that special reasons had existed last year to account for the sum being due to activities in connection with unemployment relief.

The situation was that the prime minister, chief of the present government, in an endeavor to have all things squared away for the beginning of the fiscal year, was seeking authority for the payment of these accounts now instead of placing them in the next supplementary estimates for 1931-1932.

"I am making an endeavor to see that hereafter there will be no overexpenditures by any minister in the administration of their departments."

It might be that his conceptions of his obligations as minister of finance may not be realized, continued Mr. Bennett, but he desired to make it clear that the appropriations passed by the House must not be exceeded.

Sir Josiah Stamp To Conduct Inquiry Into Grain Futures Sales

Earthquake Takes Heavy Toll

City Of Managua, In Nicaragua, Is Destroyed By Shocks

S.S. City of Panama, in Corinth Harbor, Nicaragua.—The City of Managua is in ruins and there are hundreds of bodies, Duke Palmer United States Marine Corps aviator, said on his arrival here, after witnessing the results of the earthquake which devastated Managua. The city was still on fire when he left, he said.

Palmer had come over here from Managua to scrape up all the medical supplies he could get from this ship and from any other source where they were available.

"The whole town is in ruins," he said. "I don't think there's a building left standing, and there are hundreds of bodies buried.

"The heaviest toll taken was in the penitentiary, which collapsed, and buried so much it had been ground to powder.

"Fire roared through the wreckage, and four were seen in one time. Martial law was declared immediately.

"The railroad is destroyed, and all the wires are down. You can't get any word outside except by 'plane to Corinth, and then possibly by radio.

"Hugh Wood, also of the Marines in the marines had the rescue work well under way."

Appointed Lieut.-Governor

Lt.-Col. Monroe Receives Appointment For Saskatchewan

Ottawa, Ont.—Lt.-Col. Hugh Edwin Munroe, M.D., C.B.E., of Saskatoon, has been appointed Lieutenant-Governor of the province of Saskatchewan, Premier Bennett announced. The appointment was made by Premier R. B. Bennett. He succeeds Hon. H. W. Newlands. Dr. Munroe is one of the "old timers" of North West Mounted Police stories and a prominent medical practitioner of Saskatoon. He has a distinguished military record.

Mr. Newlands retired from office on December 31, 1930. At that time Premier Bennett said he was appointed administrator of the province.

Because of illness of Sir Frederick, an acting administrator was named, Mr. Justice J. T. Brown, of the Saskatchewan Court of King's Bench, now holding this post.

Look For Better Prices

Believe Canadian Wheat Prices Due For Rise Shortly

Toronto, Ont.—Belief that Canadian wheat prices are due for a rise shortly, was expressed by C. W. Peterson, of the Farm Loan Board, recently at Calgary, Alberta. Europe, contended Mr. Peterson, who is visiting the city, could not continue to produce wheat at present prices and when they did advance their prices the Canadian price would also increase.

The United States, he thought, would soon disappear from the wheat market and would become purely an importing country.

Ottawa, Ont.—Does the sale of grain futures operate to the detriment of the producer? This was the "simple, single question" which Sir Josiah Stamp, and his colleagues will be asked to determine, Premier Bennett announced in the House of Commons. Sir Josiah, eminent British economist, consented to act as chairman of the commission to conduct this inquiry, at considerable inconvenience to himself.

The government had taken the view that there had been such sharp differences of opinion on this continent and in this country as to the desirability of maintaining markets for the sale of futures in Canada, that it was thought best to secure the opinion of some one entirely removed from the scene of these conflicts of opinion, Mr. Bennett declared. Hence Sir Josiah had been asked to head the inquiry and had consented.

Two other commissioners will complete the board, one selected by the recommended in the House of Commons, and the other to represent the grain exchanges. They will be selected shortly.

The commission will, in all probability, hold open hearings in Winnipeg, and possibly in other centres in the west, Hon. Robert Weir, Minister of Agriculture, stated. The minister explained that the commission would be given a free hand in the way it was desirous to get all the information possible and also desirous to hear representatives of all those parties affected, open hearings would no doubt be decided upon as the most expedient. The government was unanimous that those who could throw any light on the problem should be heard.

Expectation is that the investigation will be completed and the report made public in time to guide in the marketing of the 1931 crop. Mr. Weir viewed with favor the International wheat conference to be held in London, England, in May. "All the information we can get on the subject is to the good," he said.

Counsel will be selected to represent the government, the grain exchanges and the producers, according to present plans.

Ripped Fabric Caused Dirigible Disaster

Commission Gives Report On Crash Of R-101

London, England.—The disaster to the dirigible R-101, which stunned the world when it came down in flames on a hillside near Beauvais, France, last October, killing 46 men, has been laid to defective fabric, the causes and not to human failure. The report of the Simon Commission, which made an exhaustive study of the disaster, and just made public, attributed the disaster mainly to "a substantial loss of gas in very bumpy weather."

The report considered that it was probable that the forepart of the gasbag envelope ripped, but that nothing of this sort happened on a previous occasion and no amount of care could assure that it would not happen again," the report said, emphasizing the possibility of mechanical failure in dirigibles as at present constructed.

The commission refused to take a position one way or another regarding the future of lighter-than-air navigation.

Seeking New Record

Netheravon, Wiltshire, Eng.—Lieutenant-Commander Glen Kidston, with Lieutenant C. C. Jones, as co-pilot operator took off from here March 31, in an attempt to set a new air record from England to Capetown, South Africa.

World Wheat Conference Will Be Held In London On May 18th

Rome, Italy.—Canada House, at and Mrs. England, will be the scene of a conference between representatives of wheat exporting countries of the world. The conference will endeavor to reach agreements for the orderly marketing of the next crop. Hon. G. Howard Ferguson, Canadian High Commissioner, will preside.

The conference will meet on May 18, and its activities will be confined only to Mr. Ferguson a resolution, in which the high commissioner moved that the conference suggest the London meeting, at which delegates of countries exporting wheat should meet to organize, on an international basis, the exportation of next year's crop. The motion also suggested that the United States should be invited to take part in the discussion.

The conference got a free hand in tackle the problem only after a long and strenuous fight recently, in production committee of the world wheat conference. Endeavors were made to circumscribe the activities of the London committee, and to make it, in effect, responsible to the International Institute of Agriculture, under whose auspices the Rome wheat conference was called.

Exporting countries, with Canada leading, strongly opposed any such limitations. Mr. Ferguson held the exporters' conference was a distinct, independent, organization. "We are subservient to nobody. We are not an adjunct of anybody. We are a distinct conference called to discuss a definite problem," he declared. "We shall welcome any information we can get from here that may help us to reach a successful solution, but we ask the committee not to pass any resolution that, instead of helping, will restrict us."

Market For Overseas Grower

Tons Of Foodstuffs Imported By City Of London, England.

Figures, and oddly enough they are "provisional" figures, are now available for 1930, which tell a wonderful story of London's appetite. Its weekly bread consumption, for instance, approaches 25,000,000 two-pound loaves. If they were all the "handmade loaf" variety the daily ration placed end on end would stretch for 600 miles. In addition to home supplies 21,500 tons imported 3,500,000 tons of wheat and 215,000 tons of flour in 1930. Cheese imports to suit all palates from cheddar to gorgonzola totalled 129,000 tons.

To augment breakfast supplies, nearly 150,000 tons of bacon and ham, and 72,000 tons of eggs were imported, and London required over 160,000 tons of butter in excess of the home-grown supply.

For lunches and dinners, London purchased 600,000 tons of chilled and frozen meat from Australia, New Zealand and South America, and dried fruit, chiefly in the form of sultanas, currants, and raisins for puddings and cakes totalled 111,000 tons.

London heartily supported the "Eat More Fruit" campaign, and received from overseas 627,000 tons of green fruit and vegetables. Even then its demands were not entirely satisfied, for canned goods, much of which was fruit, accounted for a further 131,000 tons.

Our great-grandmothers told us how to make "One teaspoonful for each person," they said, "and one for the pot." In 1930, London imported over 480,000,000 lbs. of tea equivalent to 4,320,000,000 cups with a goodly allowance for the pots. London, too, has a very sweet tooth and some 670,000 tons of sugar were necessary to satisfy its cravings.

Overseas growers have much to be thankful for to the London market. Its port serves nearly one-third of the overseas requirements of the population of England, and London pays up what it does not ask for extended credit.—St. Thomas Times-Journal.

Strange Eastern Custom

Tales Has Cemetery Built Up Like Large City

Travellers in Egypt approaching Cairo from the east are deeply impressed with the striking appearance. In a valley between lines of broken hills, of a seemingly opulent city, close-built with houses of varying sizes and dominated at each end with great domes and slender minarets. They are, however, greatly amazed and astounded to find that not a living soul is in it. Such is the "Eastern Cemetery," or "cemetery of the dead," as the magnificent city of the dead is known. It has houses, streets, courts, shaded walks, and large, central buildings which are the homes of the wealthy or great. The principal structure, under a huge dome, is called the "Mosque of Sultan Barkuk," the tomb of a sultan. There are also the squalid quarters of the poor. These cemetery homes often contain many rooms, all well furnished and decorated with beautiful Oriental tapestries and silk hangings.

How He Diagnosed It

She was one of those nagging wives. One night she attended a lecture on "How to cure your husband," and next morning, impressed by what she had heard, she appeared at the breakfast-table wearing an air of patient resignation.

Her husband came into the room and, catching sight of his face, sank into an armchair.

"Good heavens!" he moaned, "jack-jaw."

Distillers Modern Lighting

The Duke of Bedford, who was seventy-three the other day, is president of the Zoological Society of London, but apart from that he has a private zoo of his own at Woburn Abbey, his country seat. The Duke himself is fit entirely by candles and oil lamps, for the Duke has set his face against the more modern system of illumination.

Jim—"I've heard the truth's seldom."

Elsie—"Yeah? Told it?"

Jim—"To pay my income."

"You want an overcoat to match the suit?"

"No, I want to tell you that the trousers waistband is pressing the back of my neck and I'm sitting on the waistband buckle."—Pflegende Elemter, Munich.

W. 36. W. 1884

More Room Inside

Cow Has Greater Capacity For Food Than Horse

How much room is there inside? Did you ever look at a nearly full-grown steer and then at a mature horse and estimate just how much stomach capacity each might have in relation to their size? If you have, it is just possible that your estimation was wrong, unless at some time or other you had received the "low-down" on the matter, for the figures on the cow's stomach capacity have a stomach capacity spread over four receptacles, called the four stomachs, of as much as 50 quarts, or something over five and one-half bushels. Not, of course, meaning that the steer would be able to take in that amount of food at one time in the dry state, but after a good, big feed there may be just that quantity of food and liquid material undergoing digestion.

The horse, on the other hand, has a stomach capacity of twelve to fourteen quarts at the best. Not much over half a bushel. Even though the comparison is scarcely fair to Dobbin with his single stomach against the many four of it is one that he just hasn't the room inside.

People Should Have Gardens

Even Little Plot Of Ground Will Prove Profitable

Are you a one-mind farmer? There are far too many in this country. The single aim of growing corn, or wheat, oats, corn, rice, potatoes, or what have you, but at any rate they have no room for anything else. The man grows corn. If he wants potatoes he buys them. Another man grows potatoes. If he wants corn he buys it. This is very well conditioned as they are, seems to be logical time for one-mind men to get out of the city and have a little plot of ground and a garden for your own use. When you want a salad, you know that cucumbers, onions, radishes, and lettuce are waiting to be picked or purchased in less than a hundred yards away.

City men who were born in agricultural sections should be 100 to 1000 into the country in order to procure some of the fresh things they grew when they were boys. Men who call themselves farmers often seem to be less interested in these same fresh things than the farmer boys who are their sons.

Grow a few vegetables in a sunny, well-drained plot of ground this year. It is well worth while.

The Timid Soul

Man Offers To Buy License For His Dead Dog

If Diogenes ever makes the rounds of the kennels he will be hailed as one should be referred to H. J. Gasper of Lansing, Michigan.

Gasper had a dog last year, but before he could buy a license for it the pup died. Since then Gasper's conscience has been troubling him, he wrote his old friend, Sheriff William Franch.

"My dog died last May. Do I have to pay 1930 license for it?"

The sheriff assured him that he could let the matter drop.

Essentials In Public Speaking

Good Voice and Ability To Think On Your Feet

A good voice, presence of mind, familiarity with the subject and the ability to think on your feet are essential in public speaking, H. S. White, M.P., told the Central Y.M.C.A. Speakers' Club at Kingsway recently. "The most difficult thing in public speaking is to feel at home on your feet. When you can think on your feet, you will make a man," Mr. White said. "I have seen many instances where a speaker was left with an audience of only a few members in the house because his nervousness was not overcome."

Famous Bells Silent

Historic Bow Bells of Dick Whittington fame are in a sad way. No bell can be rung until the bells and steeple of the church of St. Mary-le-Bow, Cheapside, have been repaired. The massive bell, a hefty stock in the days of town criers, dates from 1817. The tower is appealing for £5,000 to put the tower and bells in order.

Temperature To Suit

Burglar—"Are the people of the house up yet?"

Servant: "No, they're all out."

Burglar: "How you paid your dog licence?"

Servant: "We haven't any dog."

Burglar: "Well, then, I've come to tune the piano."

Seventy-Two Year Job

Having rounded out 72 years at the same bench for the same firm, Alexander Ingram, recently was presented a wallet of money and a case by fellow employees. Ingram started his apprenticeship when only 12 at the bench at which he now works.

A Young Financier

Tommy—"Nurse did you say you would kiss me if I were good all day?"

Handsome Nurse—"Yes, dear, and if I were good."

Tommy—"No, nurse, I have sold the kiss to my big brother for a shilling."

First Railway In Canada

Train Was Operated By Horses Ninety-Five Years Ago

Dr. Manion's reference to the approaching centenary of steam railway enterprise in Canada is a reminder of the progress that has been made in railroading since that July day in 1836, when the firs train was run from Laprairie, on the St. Lawrence, to St. John's, on the Richelieu — with the assistance of horses.

Speeds were about fifteen miles of track, four passenger cars, each capable of carrying eight people, twenty freight cars capable of a ten-ton load, and an engine that weighed all of five or six tons and cost less than $7,500. Today the big 4-8-4 locomotives on the Canadian National weigh approximately 225 tons and the value of one of these is in the neighborhood of $160,000.

Service ran from Laprairie to St. John's was incorporated in 1832 and commenced operation in July of 1836. On the same date a survey was begun, with the assistance of $19,000 voted by the Imperial Government, for a railway from Quebec City to St. Andrew's on the Bay of Fundy. But this survey encountered difficulties due to the disputed boundary line.

Meantime, in Upper Canada also, plans were afoot. In 1834 two railways were incorporated, the Cobourg and the London Core. But the first to be completed was that from Toronto to Bradford, which commenced operations in 1853.

From that time development has been rapid. There are today in Canada about 41,500 miles of railways, and the investment is over $12,750,000,000, nearly 120,000 people are employed, and there is a wage bill of $290,000,000.—Toronto Star.

For Better Farming

Canadian Farmers Are Eager To Learn About Improved Methods

General desire among farmers to learn better and improved methods of farming practice was very evident. During 1930 and the first month of 1931, six lecture and demonstration trains were operated by the Canadian National Railways in different parts of the Dominion, and were attended by 45,700 farmers. The trains were operated in connection with Federal and Provincial Departments of Agriculture and other institutions interested in the promotion of better farming. A poultry and dairy demonstration train operated during the first part of 1930 in the Province of Saskatchewan made 48 stops and had a total attendance of 3,000. In British Columbia an agricultural demonstration train toured the province, making 23 stops with an attendance of 2,100. In Manitoba, in connection with the idea of placing sheep on farms, a sheep demonstration train was operated, with 20 stops and an attendance of 1,700.

In Ontario a soil and crops' demonstration train made 56 stops and had an attendance of over 9,000. In Quebec, the soil improvement train operated by the National Railways and the Quebec Department of Agriculture made 56 stops and served 3,000 farmers, and more than 5,000 soil tests were made. During January 1931, a soil demonstration train was operated in Saskatchewan, with 42 stops, and a total attendance of 6,500.

A Good Trader

In Brooklyn, N.Y., west Lester Glass, a farmer, with ten bushels of apples, in his horse and cart. He found it impossible to get a good market price. He swapped apples for flour, flour for meat, meat for hay, and that, then drove home in a Model T. Ford, bringing food for dinner, a ton of hay, a pig, a quarter of tobacco, five gallons of gasoline, 50 cents in cash.

Air Taxis Predicted

The day when air taxis will carry passengers from railroad stations to the doorsteps of air liners is envisioned by Sir Samuel Hoare, former British Secretary of State for Air, in the opinion of London, England. In this connection, he said, he centred his hopes in the autogyro, a windmill type of airplane, which rises almost vertically.

Ship Launching Problems

The launching of bigger ships in Britain is introducing new problems in launching, as even the big rivers are sometimes not enough nor deep enough in some localities where the ships are built. The new Cunard giant, which is to be built at Clydebank, will involve a cost of about £70,000 for widening and deepening the Clyde before it can be launched.

Measured By Days

The lecturer was apologizing for having talked so long.

"I'm sorry if I have wearied you," he said, "but I unfortunately left my watch behind, and there is no clock in the room."

A voice from the audience replied: "There's a calendar behind you, sir!"

Bachelor Uncle: "Baby six weeks old, you say. Talk yet?"

Proud Father: "Oh, no; not yet."

Bachelor Uncle: "Stop, oh I'm

JULES VERNE

Jean Jules Verne, grandson of the famous French novelist, arrived in New York from Paris to attend the christening of Sir Hubert Wilkin's polar submarine, the "Nautilus," the name of the submarine in his grandfather's prophetic story, "Twenty Thousand Leagues Under the Sea." M. Verne will also accompany the expedition in the trip to the North Pole.

Are We Over-Governed

Urges Abolition Of Posts Of Lieutenant-Governors

Urging abolition of the posts of lieutenant-governor in Canadian provinces, Captain Elmore Philpott, Liberal candidate in the recent by-election in Hamilton by-election, declared that the functions of the office are occupied with much costly governmental machinery as Canada.

"The position of lieutenant-governor should be abolished forthwith," he said. "The chief justices of the provinces should discharge all the constitutional duties of the crown in the provincial field.

"In Britain, New Zealand, and the Irish Free State, one king — or one king's envoy—is sufficient. One parliament does all the work, yet here in Canada we pay the enormous expense of ten parliaments and ten representatives of the King."

Admitting the impossibility of one parliament for Canada, due to racial and geographical conditions, he urged amendments to the British North America act in order to clarify "the relative fields of action between the Dominion and the provinces. "The task of this generation is to build on the foundation laid at confederation to regard confederation as the beginning rather than the end of reform."

Prairie Industries

Production In Textile Industries Now Exceeds Nine Million Dollars Annually

It is noted in the Western Canada News that textile production in the following industries in the Prairie Provinces now exceeds $9,000,000: Cotton and jute bags; men's furnishing goods; dying, cleaning and laundry work; women's factory clothing; hosiery, knit goods and fabric gloves; leather clothing; awnings and tents; canvas goods, sewing, tents and sails; carpets and other textile industries.

Burnt Sugar Cake

1 cup of sugar; 1 cup of white sugar; ½ cup butter; 2 eggs; 1 teaspoon vanilla; 2 cups cold water; 2 cups flour; 2 teaspoons baking powder.

Take 1 cup white sugar and set on stove to brown, stirring often. Then add ½ cup boiling water and stir well. When cool, add half to the bake mixture. Mix the rest with icing sugar and put on top.

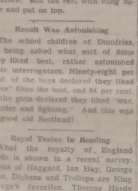
Result Was Astonishing

The school children of Dundries, on being asked what sort of films they liked best, rather astonished their interrogators by twenty-eight per cent of the boys declared they liked "love" films the best, and 84 per cent. of the girls declared they liked "war, murder and fighting." And this was in good old Scotland!

Royal Tastes In Reading

What the royalty of England reads is shown in a recent survey. Besides Hagard, Ian Hay, George Eliot, Dickens and Trollope are King George's favorites. Thomas Hardy and Sir James Barrie are the Queen's favorite authors. The Prince of Wales is said to dote on "thrillers" and detective stories.

A HAZARDOUS LIVELIHOOD



Photograph shows ice pack off the coast of Newfoundland with sealers engaged at their calling.

Fish Is Valuable Food

Contains Elements Essential For Protection Of Health

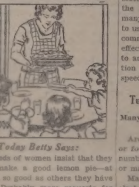
Residents in the interior of a great continent, as a rule, are more or less oblivious to the food value of fish, particularly of sea fish. Yet scientists, who are concerned with food values, have discovered in recent years that fish contain elements essential for the protection of health as well as for the building up of strength, and contain these, too, in larger quantity than do most other foods. For instance, as the Fisheries New Bulletin points out, Vitamin "D" is abundant in fish, though lacking in many other food stuffs. Vitamin "D" is especially important in the diet of growing children.

Vitamins "A" and "D," iodine, calcium, which is necessary to the growth and strength of teeth and bones—these are among the elements which make fish foods so valuable to the human body. In many other foods these elements are lacking or, as has been said, they are present in such smaller amounts than in fish. Canadian fish foods are available all the year round, whether fresh, or frozen, or smoked, or dried, or pickled, or canned—just because so many different varieties of fish and shellfish are taken in Canadian waters, they can be prepared for the table in so many different ways, that they may be used frequently without monotony in the family menu.

What Could You Expect

Staunch Critics Heard About Women Drivers Proved To Be Foolish

Women are supposable for less than their proportion of accidents, according to a recent address by a traffic engineer. The only thing that prevents some minister who because he was fined $4.50 and 7 was only fined 25 cents."



BETTY BARCLAY'S HELPFUL HINTS

Today Betty Says:

Hundreds of women insist that they cannot make a good lemon pie—at least so not good as others they have tasted. Probably more requests for recipes for delicious dessert are mailed to dietitians and food experts, than for almost any other dish. Here is one recipe that I feel sure will please:

Lemon Pie Supreme

1 cup sugar.
1½ cups boiling water.
4 tablespoons cornstarch.
3 tablespoons flour.
½ teaspoon salt.
2 eggs, separated.
½ cup lemon juice.
Grated rind 1 lemon.

Sift dry ingredients. Add water and cook in double boiler until thick (15 minutes.) Add slightly beaten egg yolks and cook 2 minutes longer. Then add lemon juice and grated rind. Cool and turn into baked pie shell. Cover with meringue made by beating egg whites until frothy — then add gradually sugar until a teaspoon baking powder and continue beating until stiff. Put into moderate oven (325 degrees) for 15 minutes to brown.

World's Largest Man

Uncle John was never so lazy as a man could be and proved it in a dozen ways.

"What time is it?" asked Mrs. John one day.

"Dunno," replied John from the living room.

"But the clock is in there," cried his wife.

"My chair aint turned that way," came the answer.

Still Wearing Crown

A tomb discovered by Prof. Selim Hassan, containing a mummy adorned with a gold crown and a complete set of jewelry, is perhaps the only tomb in the area around Cairo, untouched by thieves. The gold crown was 24 inches in circumference and was kept in position by two gold lotus leaves, joined by a chalcedony.

Wool Shipped From B.C.

British Columbia wool, to the total of 300 tons, is being shipped to United Kingdom during this the first large consignment of the product of provincial flocks in nine months. At an average of four pounds to the sheep this consignment represents a clip of 150,000 sheep from the interior valleys of the province.

She Got It

Wife—"Herbert! show me that letter!"

Husband—"What letter?"

Wife—"That one in your hand. It's from a woman. I can see by the writing, and you turned pale when you saw it."

Husband—"Yes, here it is! It's your dressmaker's bill!"

Juvenile Delinquency

Former Ontario Minister Of Health Appeals For Exercise Of Common Sense

Little of "Old Nick" does not do's any harm in the opinion of Hon. Dr. Forbes Godfrey, former Ontario minister of health, and he said so in the Ontario legislature in a bill to amend certain of the medical schools bill sponsored by the new minister of public welfare, Hon. A. G. Martin.

Appealing for the exercise of common sense in handling juvenile delinquents, Dr. Godfrey said Mr. Martin could "read all the books he liked," and talk about all the "fine theories he liked," but he could not get away from the facts.

The minister had just finished explaining the measures being taken by the government to look after subnormal and delinquent boys. The measure before the House was to set up an advisory board to look into all cases of delinquency which came up in the courts and study the reports being made. The minister, it was explained, would recommend the institution to which the boy should be sent.

"After listening to the minister, I would not hear the prime minister of this province and other members of the House have reached their present position without being examined by a psychiatrist, said Dr. Godfrey.

Some boys, the former minister went on, had a streak of destiny in them. He knew a lot himself when he was a lad and so had former Premier Ferguson.

"I think the high commissioner and I hold a record," he said. "He and I were both haled before a magistrate and fined. The only difference between the prime minister and me was that he was fined $4.50 and 7 was only fined 25 cents."

World's Largest Man

Uncle John was never so lazy as a man could be and proved it in a dozen ways.

"What time is it?" asked Mrs. John one day.

"Dunno," replied John from the living room.

"But the clock is in there," cried his wife.

"My chair aint turned that way," came the answer.

Still Wearing Crown

A tomb discovered by Prof. Selim Hassan, containing a mummy adorned with a gold crown and a complete set of jewelry, is perhaps the only tomb in the area around Cairo, untouched by thieves. The gold crown was 24 inches in circumference and was kept in position by two gold lotus leaves, joined by a chalcedony.

Wool Shipped From B.C.

British Columbia wool, to the total of 300 tons, is being shipped to United Kingdom during this the first large consignment of the product of provincial flocks in nine months. At an average of four pounds to the sheep this consignment represents a clip of 150,000 sheep from the interior valleys of the province.

She Got It

Wife—"Herbert! show me that letter!"

Husband—"What letter?"

Wife—"That one in your hand. It's from a woman. I can see by the writing, and you turned pale when you saw it."

Husband—"Yes, here it is! It's your dressmaker's bill!"

Standardizing English Language

Tendency To Lingual Separation Between England and America No Longer Exists

Efforts were made some years ago to prove that the American people were creating a language of their own and that the people of England were finding it increasingly difficult to understand the American language. American books, it was said, required glossaries for the enlightenment of English readers. Now Sir William A. Craigie of Oxford, who for some time has been on the faculty of the University of Chicago, as professor of English, argues in the Saturday Review of Literature that the tendency to lingual separation, so marked during several decades of the last century, is being counteracted powerfully today, a state of things that is likely to continue.

The growth of population in the United States, Canada, Australia and New Zealand, according to Prof. Craigie, acts as a unifying force, preserving the common language from cleavage. American variants, so called, are included in new English dictionaries. This applies not to words alone, or to words and idioms, but to pronunciation as well. Further, English in Great Britain and in the British Dominions and Colonies is being Americanized, largely by means of the talkies, pictures and captions of silent pictures, as well as by popular novels and magazines, business contacts, travel and tourism.

It is early to speak as American in England, or an Englishman in the United States, through his employment of certain words in commerce. His "elevator" will be "lift," "baggage" or "luggage," "bag" or "grip," "store" or "shop," "conductor" or "guard," "street car" or "tram," and so on. But the remarkable fact is that these universally recognized national differences are not receiving any considerable additions, and the unity of the English tongue is shifting, and many persons are using or beginning to use, English, American, or both, in communication with foreigners. One effect of these factors and forces is to arrest the once threatened separation of American speech from the speech of Great Britain.

Turn Slack Hours Into Food

Many People Use Spare Time In Making a Garden

Are you working five days a week, or four, or three? If so, you have a number of hours that may be wasted or made profitable, as you will decide.

Many men are using some of these slack hours by turning little plots of ground into blossoming rows of potatoes, tomatoes, beans and corn. Not only are they keeping themselves fit physically but they are assuring their wives that a little later on there will be plenty of fresh garden vegetables for the children as well as the adults.

It is surprising what can be produced from even a little plot of ground. It may be a backyard, a side yard or a vacant lot. Never mind to be entitled to the name "garden." A few seeds, a little fertilizer, a little hoeing, and a little weeding from time to turn this plot of ground into something worth while.

Incidentally, it won't be long before you can turn some of your slack hours into a garden. When you buy your seeds from your neighborhood druggist or drop in at the office with your calendar and see how soon you are assured of two or three days of good hard work at any rate.

Vegetable Canning In Canada

Vegetable canning in Canada had an active year in 1930, increasing over 1929 in almost every line. The pack of tomatoes increased by nearly 100 per cent., and peas by almost 165 per cent. over the 1929 pack. The increase in corn practically approximated one cent per head of population. It totalled 10,000 cases in 1929, compared with 6,182,857 cases in 1930.

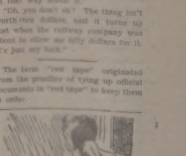
Second Like Hard Luck

"What's the matter, old fellow?"

"I've received my travelling bag."

"I don't see why you should accept in that way exactly."

"Oh, you don't do?" The thing isn't worth ten dollars, and it turns up just when the railway company was about to allow me fifty dollars for it. It's just my luck."



Economy

"Come back, Daisy, going out in this weather with that lovely umbrella!"—Nebelspalter, Zurich.

Artificial Lighting Units May Be Used Instead Of Sunlight In The Grading Of Grain

Grading of grain in Canada is done by the natural light of the northern sky. In an effort to overcome the obvious inconvenience of this method, one of which is the difference in light at the various inspection points, and another the limitation on time, the National Research Council at the request of the Board of Grain Commissioners, has devised a series of artificial lighting units. E. H. Ramsay, the Chief Grain Commissioner, and J. D. Fraser, the Chief Grain Inspector, have inspected the results of the experiments and two of the most promising units are being shipped to Winnipeg to be tested.

In order to get sufficient uniformity of illumination the lamps are placed in an inspection stall which is boxed in on four sides without any roof, or at the light. The illumination in one of the units to be tested is a combination of direct and indirect lighting without any visible space about the test square. Various combinations of accessory and non lamps have been studied. In the layman one of the striking results of the experiments has been the difference in effect which various combinations of the light bulbs had in showing up the different qualities of grain.

As a part of the general experiment the spectra of light reflected by various samples of wheat have been measured by means of a recording spectrophotometer. It was found that the light of wave lengths from the far red to about the blue, starchy wheats reflected more light than good grades of frozen wheat; green and frozen wheat approximately the same, and good wheat less than the others. Light of shorter wave lengths gave different results but the final conclusion reached was that there appeared to be no definite adoption of selective reflection of visible light which would make grading by photoelectric possible.

Dr. D. C. Rose has been conducting the experiments in the John Street laboratories of the council at Ottawa under the direction of Dr. R. W. Boyle, the director of the Division of Physics. Dr. Rose has been requested to supervise the installation of the lights in Winnipeg.

Tractors In Western Canada

75,311 Tractors In Operation In the Three Prairie Provinces

There are 75311 tractors in operation in the three Prairie Provinces of Canada—Manitoba, Saskatchewan, and Alberta, 36,439 in Saskatchewan, 21,951 in Alberta; and 13,387 in Manitoba, according to an estimate made by "Canadian Farm Implements," a Winnipeg publication. There are also 8,991 tractors were sold in Western Canada. Sales of harvester-combines in these provinces in the last five years totalled 9,543, according to the New West Farmer, which estimates the number of threshers in the Prairie Provinces at 60,000. Meanwhile the horse continues to retain a place of popularity among the farm stock.

Speed Of Light

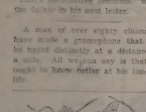
Light Railways Travels At a Uniform and Fixed Speed, According To Scientists

Light travels always at the same speed, according to the finding of a scientist, who thus adds fresh proof of the correctness of Professor Einstein's relativity theory in which he declared that the velocity of light is absolute. Prof. George Jean, of Jena University, Germany, states he have proved the uniformity in the speed of light by the use of a device which he says measures accurately one-thousandth of the length of a light ray.

What Mattter Called It

Son in college was applying pressure for more money from home. "I cannot understand why you call yourself a kind father," he wrote to his dad, "when you haven't sent me a check for three weeks. What kind of kindness do you call that?" "That's unconditional kindness," wrote the father in his next letter.

A man of over eighty claims to have made a gramophone that can be heard distinctly at a distance of a mile. All he says now is that he ought to have better at his time of life.



Recruit: "You could have helped yourself, you can swim."

Recruit: "Yes, but who can think of that when he is drowning?"—Kasper, Stockholm.

Market Must Be Regained

University Professor Stresses Increased Hog Production In Western Provinces

Increased hog production in the next few years was prophesied by Prof. J. P. Sackville, of the University of Alberta, in addressing the Saskatchewan Swine Breeders' Association at dinner at the Kitchener Hotel, Regina.

The need for regaining export markets for hogs was stressed by the speaker. E. P. Stockbridge, of the University of Saskatchewan, director of the Boys' and Girls' Swine Club, outlined the plans of this group for this season of hogs to the Royal Fair next winter, in cooperation with the swine breeders. The president of the association, E. F. Richardson, presided at the dinner.

A Wandering Planet

Discovery Of An Asteroid Moving Rapidly In Vicinity Of Earth's Orbit

The discovery of a rapidly moving object, "Probably a peculiar asteroid, perhaps of the type of Eros," was made public by the Harvard College observatory. Because of its rapid motion, the announcement set forth it was concluded that it was probably a wanderer from the depths of space.

The news of the discovery reaches Harvard from the Central Astronomical Bureau at Copenhagen. The discovery was made in Germany.

The announcement indicated that it was probably similar to Eros, the little planet a few miles in diameter, which swung within 16,000,000 miles of the earth in January, closer than any other planetary body.

Jerseys Shipped To Alberta

Farmers Of Province Said To Be Enthusiastic Over Stock

Every one is aware of the troubles of the Western wheat grower. With the high price of wheat in recent years many one forgot about the dairy cow but, as usual, even the west has realized at last that there is still need of the dairy cow in their farming operations.

One of the large creamery operators in Alberta, early in 1929, decided they could not do better than to encourage their 27,000 patrons wherever possible to buy Jersey cows and that the creamery would undertake to assist in the purchasing of these necessary animals.

This company operates in British Columbia and now there what an asset the Jersey was to the community. They even realized this more fully when Phil Fleming, the western Jersey fieldman, told them that part of their success in British Columbia was due to the high quality of butter that they produced and also to the fact that with the large globules in Jersey milk there was less waste in churning—that the butter-fat went out in the buttermilk.

Well, to make a long story short, this is what happened in Alberta during the past summer. There has already been shipped into the province 225 head of pure bred Jerseys Canadian cows from all over the Dominion and from the United States. The farmers are very enthusiastic over these Jerseys, which have proven very hardy, gentle cattle, good foragers and best of all very economic producers of butterfat. There is a wonderful market for Jerseys in Alberta which is following along the lines of development, but even more rapidly than that which has taken place in the Maritime Provinces in recent years.

Possible To Cut Loss

Chick Mortality Can Be Prevented By Proper Action

With the complete elimination of pullorum which is definitely possible through strict elimination of reactors in a flock as determined by the blood test, very considerable savings to Canadian farmers and poultrymen in chick losses each year. Tests carried out over a period of years by the poultry division of the Dominion experimental farms indicate conclusively that complete elimination is possible and that chick mortality from this cause can be similarly decreased. Pullorum disease is responsible for chick losses running into millions of dollars annually, and, to use the words of F. C. Elford, Dominion poultry husbandman, "much if not all of this tremendous loss is preventable."

Free Medical Services

The travelling health clinics which are in operation in the Province of Alberta, under the direction of the Provincial Government, which visit more remote districts to provide free medical services, visited 27 points last year, including 308 school districts. More than 8,000 children were inspected by public health nurses. More than 3,000 were given dental treatment alone.

Prefer British Ships

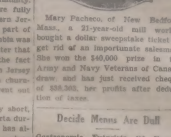
The Leviathan, of the United States Lines, is the only one of the company's ships plying between New York and Southampton, and was the only ship on which the company had money last year. Which shows that wealthy American passengers still prefer to cross in the British-owned Cunard or White Star liners.

"What shall I wear for my screen test?"

"How about a filmy dress?"

Raccoons are natives of every state in the Union.

UNIQUE MODE OF TRAVEL.



With five miles to and from work to travel each day, and with no means of transportation, W. H. Slater, a retired naval officer, devised this ingenious means of reaching his labors at Cliffe, Kent, England. The "rail-trail" or land yacht, is constructed from an old quarry truck chassis and sails, and travels over the rails of the abandoned quarry at a fair rate of speed.

LUCKY WINNER

Mary Pacheco, of New Bedford, Mass., a 21-year-old mill worker bought a dollar sweepstake ticket to get rid of an importunate salesman. She won the $40,000 prize in the Army and Navy Veterans of Canada draw, and has just received cheque of $25,385, her profits after deduction of taxes.

Decide Menus Are Duff

Gastronomic Futurists Of Europe Urge More Beauty in Food

European Gastronomic Futurists, sitting at an Academy of Good Eating, have decided that our present menus are too dull and need more color and perfume; that talking at the table is as unscrupulous as talking in church, and that the knife and fork must be suppressed.

Good food must be artistic, like sunsets and oil paintings, the academy decided further and set about drafting an entire new set of recipes.

The Academy would turn the kitchen into mixed laboratory-beauty-shop with all sorts of scientific instruments. Good cooking would be a science, not an art, and the cook would follow a formula, like a chemist mixing drugs.

The Academy believes in music and perfumes between courses. Before any dish is served, special music and a perfume to fit it are introduced. Thus wonderful, for example, there would be music of the hunting horns and perfume of the forest in October.

The Academy would end after dinner speeches. Oratory and cooking never mix.

The Academy suggests that between courses many beautiful and attractive dishes of food be carried to the table and passed rapidly under the noses of the guests in order to excite the curiosity, surprise and imagination. These foods would not be eaten. There would also be a "food cocktail," one spoon filled with a concoction of a dozen tastes and perfumes.

Arrival Delayed

New Yorker tells the story about a Scotch friend, who married home to ask his wife how she'd like a studio piano, and when she admitted it would certainly give tone to their drawing room, and questioned him as to when it would arrive, admitted that he wasn't quite sure because he had only purchased a ticket for it a few hours before and that the raffle wouldn't take place for another week.

Cadmium In Canada

Cadmium, a by-product obtained in the production of zinc, was produced in Canada for the first time at Trail, British Columbia, early in 1928. Considerable quantities of the metal are employed in Canada, chiefly for plating purposes and, because of this use in connection with the radio and automobile industries, the consumption has increased very rapidly.

A study of the causes of heart disease has been started by New York State health officials.

Radio In Northland

Lookout Towers Equipped With Radio To Aid Forest Protection In Saskatchewan

A system of lookout towers, all equipped with short wave radio sending and receiving sets, will stretch across the northland forested area of Saskatchewan up to the Churchill River, it was announced by E. H. Roberts, provincial forestry director, who is instructing forest rangers before they leave for their summer duties.

The lookout system will augment the aerial patrol, a new departure on the whole from the almost 100 per cent. aerial system used by the Dominion Government before the surrender of the province's reserves. Each lookout station will be in communication by radio with all other stations of the aerial beats, Waterhen Lake and Lac La Ronge, Mr. Roberts stated. The department, he said, is now freighting in the materials for the construction of the towers to house the rangers stationed at each point.

Four planes will be used in conjunction with the lookout tower system, two lighter detection machines, and two heavier ones for transportation of fighters and equipment to fire threatened areas.

Came Back To Owner

Watch Lost In Germany Was Picked Up In Montreal

A wrist watch lost or stolen in Cologne, Germany, in 1918, was picked up on Place d'Armes, Montreal, recently. It is now in the hands of its owner, Ex-Private Thomas Bailey, of Verdun. Where it has been for the past 13 years, will likely never be learned. On the outbreak of the war, Bailey joined up and prepared to go overseas. Prior to sailing, he was presented with a watch by a number by his fellow workers in the Northern Electric Company, Montreal. The watch still goes.

Novel Use For Truck

Supplied Power For B.C. Town When Lighting Plant Damaged

A novel use for a truck was found in Christina Lake, in British Columbia, recently. When the Christina Lake resort suffered from a fire which badly damaged the lighting plant, the services of the truck were requisitioned to supply power for the hotel and community. The power was supplied from a heavy 3-ton truck engine, converted a generator by means of a belt. For a month the motor was run day and night without a stop.

Want British Films

Ontario Government To Seek Quota On British Films

Convinced that more British pictures should be exhibited in the theatres of Ontario than at present, the government is bringing down a bill to the legislature that would authorize the establishment by order-in-council of a quota. Notice of this legislation was filed with the clerk of the assembly by Hon. E. A. Dunlop, provincial treasurer.

A Frog Farm

It is a long jump from birds to bullfrogs, but Jack Miner, noted Canadian naturalist, plans making it. For the purpose of providing "larger and juicier hams" for the palates of epicures, he is experimenting in converting a marsh into frog-ranch. Thousands of polliwogs are being imported from Kansas for foundation stock. The mild climate of Ontario may be drowned by the hoarse croaks of the stall-fed "bulls."—Vancouver Province.

Radio Reception At Churchill

Can you imagine sitting by your radio, and with ease or no trouble picking up in an evening stations in London, Eng., Pittsburgh, U.S.A., France, Germany, Denmark and Russia? Yet it is possible, as demonstrated in the village of Churchill, up on Hudson Bay. Want to move up?—Christian Science Monitor.

Especially the Last

Two charming ladies dropped in at Brentanos, New York, the other day and consulted a salesgirl in the children's books department. "There are three books I'd like to get for my son," one explained, looking down her shopping list: "Huckleberry Finn, Tom Sawyer, and Mark Twain."

Three Ingredients Needed

A blizzard calls for three ingredients, and must have all of them—cold, high wind, and a heavy snowfall, with the latter not so important as the first two because cold and a high wind to blow the snow and the air can create the impression of a heavy snowfall even when it is comparatively light.

Grist Mill For Moose Jaw

A new industry is to be added to Moose Jaw in the form of a grist and flour mill to be created early this summer at a cost of about $25,000.

"I waited twenty years for my wife," writes a correspondent.

That'll teach him not to go shopping with her again.

Egypt's bus lines are increasing.

War-Time Pilots Have Plan For Establishment Of a Royal Canadian Air Force Reserve

Two Most Important Factors

Regularity and Quiet Necessary In Feeding Of Livestock

An authority on the feeding and fattening of livestock has pointed out that the two most important factors in the feeding of livestock, next to the actual feed itself, are regularity and quiet. He might have also added that these same two factors, particularly the former, are two of the most neglected.

There is a certain temperament to a group of steers which are being fed, and there are two important ways in which it can be upset. The result is more or less irregular system of feeding which keeps the animals standing and restless for an unusual length of time and which cuts down the amount of feed available for fattening into fat. The same thing occurs when the feeder neglects common precautions of quiet and order in handling and working around the cattle.

These are considered small matters by many feeders, and other neglects in connection with the chute may tend to make their importance. The fact remains that they are important and are not overlooked by the man who has the most pride in his cattle or his ability to make them pay dividends even in the face of low prices.

BETTY BARCLAY'S HELPFUL HINTS

Today Betty Says:

Unless we get sufficient vitamin "C" each day, tooth decay is very likely to set in. One prominent authority, Dr. Milton Theodore Hanke, of the University of Chicago, recommends a full pint of orange juice daily with the juice of a lemon added to the proper daily amount of Vitamin "C" necessary to check dental decay. It's easy enough to make children take this kind of medicine. Then, all it needs is a little luxury at any time of the day.

When following recipes, make your teaspoons and tablespoons level unless otherwise specified. You should fail to do this cannot blame the recipe if anything goes wrong.

When the Current Goes Off

Everything Stops In This Highly Electrified Age

It makes us laugh, with a hearty old laugh, to see how completely our homes go to pieces nowadays when anything happens to the electric current. It used to be that when a storm broke down the electric wires, the only thing that happened was that the child who was doing its lessons by the light went out. Now, when the light goes everything else quits too. There is no ice in the icebox, no music in the piano, no coffee in the percolator, no fan whirring, the radio, no toast in the toaster; the vacuum cleaner stands silent in the corner. Shaver can't keep his face. Brother's toy trains stop running; the heat in the bathroom goes off, the bed-warmer doesn't work, and the frying-pan's grease stops sputtering in the middle of an orange. It's just a question of gathering around a log fire and marking time till the storm abates.

Source Of Canadian Platinum

All the Canadian platinum and allied metals are obtained from the treatment of the Sudbury nickel-copper matte, with the exception of a few ounces of platinum obtained from the black sands of British Columbia, and a small quantity produced by prospector stops squeezing rifle in the middle of an orange. It's just a question of gathering around a log fire and marking time till the storm abates.

Source Of Canadian Platinum

All the Canadian platinum and allied metals are obtained from the treatment of the Sudbury nickel-copper matte, with the exception of a few ounces of platinum obtained from the black sands of British Columbia, and a small quantity produced by prospector stops squeezing rifle in the middle of an orange. It's just a question of gathering around a log fire and marking time till the storm abates.

"Mr." and "Mrs."

The titles "Mr." and "Mrs." now common property, were not always so freely bestowed. In the seventeenth century only such persons as ministers and physicians and their wives prefixed these titles to their names. The title for those above the rank of servant but below that of gentlefolk was "Goodman" or "Goodwife."

Cherry Trees For Canada

In commemoration of the Canadian Chamber of Commerce trade mission to Japan last year, the authorities of Kobe and Yokohama are forwarding to the Japanese Association of Canada 40 cherry trees.

Efforts will be made to establish a Royal Canadian Air Force reserve following discussion at the first reunion dinner of the Canadian War-time Pilots and Observers' Association held at Ottawa. Under the scheme senior officers who served overseas will be enabled to continue flying and through that medium increase public enthusiasm in air transportation.

Friendships were renewed and bonds of service recalled at the gathering of pilots. It was decided to make the dinner an annual affair and it will be held in Montreal next year.

Suggestion that Rockcliffe Field, Ottawa, be named "Baker Field," after the distinguished Canadian flying-ace, Lt.-Col. W. G. Barker, V.C., who was killed in an aeroplane accident there some months ago, came from J. A. D. McCurdy, of Montreal, first Canadian to fly a plane. He also suggested St. Hubert aerodrome, Montreal, be renamed "Bishop Field" after Col. W. A. Bishop, V.C., famous war ace, who was the guest of honor.

Besides Mr. McCurdy and Col. Bishop, Hon. D. M. Sutherland, Minister of National Defence; Major-General J. H. MacBrien, president of the Aviation League of Canada, and Major-General A. G. L. McCaughtin, chief of staff, were among the speakers.

Seeking to increase enthusiasm for gliding, Aviation League of Canada pledged a membership of C. Harker, partment of National Defence to establish a curriculum of training for glider-flying. It was also urged responsible for holding down the popularity of gliding in the Dominion, speakers said. It also suggested the defence department might supervise design for gliders to be used in this country.

Close co-operation between the league and the Canadian Flying Clubs Association will be maintained as was decided, as one aim for the development of Canadian aeronautics. It was decided that the national aircraft contest could well be revived a success in 1930, should be repeated this year. Venue and date for the contest will be set later.

Needed Better Treatment

Indian Medicine Man Lost Faith In Drum Beating

Out in Klaplox, B.C., lives an Indian medicine man who is not at all sure about his own ability as a doctor, according to a letter received at United Church Home Missions offices in Toronto. From Miss Menzies, field matron, who does district nursing on the Klaplox reserve.

In her letter Miss Menzies says the medicine man called once for attention. Previously he had always refused her offers of aid. When she asked the patient why he did not beat the drum for himself and take his own medicine, he replied: "Sometime drum alright. Sometime medicine alright. But me sick."

Makes Nails By Hand

Seventy-Year-Old English Woman Works Every Day At Forge

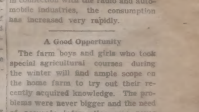
At the age of 70, Mrs. Brettle, the only woman maker of wrought nails in England, still puts in a full and hard day's work at the forge attached to her home at Lye, Worcestershire. All her operations are by hand, and she has the distinction of being the only woman worker able to make certain kinds of hand nails which are much used in South America. Mrs. Brettle turns out 2000 of such nails per day when fully occupied in this now almost unique home industry.

Cadmium In Canada

Cadmium, a by-product obtained in the production of zinc was produced in Canada for the first time at Trail, British Columbia, early in 1928. Considerable quantities of the metal are employed in Canada, chiefly for plating purposes and because of this use in connection with the radio and automobile industries, the consumption has increased very rapidly.

A Good Opportunity

The farm boys and girls who took special agricultural courses during the winter will find ample scope in the home farm to try out their recently acquired knowledge. The problems were never bigger and the need of accurate information was never greater than now, says the Farmers' Advocate.



"You seem sad—have you lost any dogs?"

"Quite the opposite—I have two bad triplets."—Moustique, Charleroi.

Spasmodic Croup
Quickly Checked
Often with one application. Just rub Vicks over throat and chest
VICKS VAPORUB
OVER 17 MILLION JARS USED YEARLY

WORLD HAPPENINGS BRIEFLY TOLD

The next session of congress will probably see restriction of immigration from Canada to about 4,000 annually.

A general election in Britain before the end of the present year was predicted in an address by S. K. Radcliffe, British journalist.

The visa fee for Canadians going into China has not been increased so far, it was learned at the Chinese consulate at Ottawa.

A visit to Canada by Lord Jellicoe, as a delegate to the British Empire Service League meeting at Niagara Falls, is expected to take place in August.

Serious losses through cutworm are predicted for 1931, in Saskatchewan, if average weather conditions prevail, according to a warning by the Department of Agriculture.

Preservation by canning of early specimens of architecture was urged at a meeting of the Royal Canadian Institute by Prof. E. R. Arthur, of Toronto.

About fifteen million years ago giant snails fifteen feet long climbed around the stern cliffs of Quebec. A place of the shell of one of these monsters of Ordovician age which has been found imbedded in a limestone cliff on Viaduct Hill.

The ban on the use of dogs in hunting deer may be brought into effect by legislation at the present session of the Ontario legislature. After several contentious sessions, the fish and game committee voted 10 to 9 in favor of continuing the use of dogs.

Official notice has been given that the Army and Navy Veterans of Canada will seek power at the present session of parliament to operate sweepstakes. The association's charter would be amended, according to a notice in a recent copy of the Canada Gazette.

Dr. Rolland Hughes, of Philadelphia, explained to the Royal Society of Medicine, meeting in London, England, a new iodine compound to be used for making X-rays of the kidneys and bladder. The new compound is expected to considerably advance the technique of diagnosis of diseases of those organs.

Contest Shows Girls Are Better Sleepers

And Less Grouchy In Morning Than Boys, Doctor Says

Girls are far better sleepers than men, and as a result feel more peppy and less grouchy in the morning, Dr. D. Laird, of Colgate University, said in an address at Ottawa.

As "intercollegiate good sleep contest" between boys of Colgate and girls at Skidmore showed that girls have less trouble going to sleep, wake up fewer times and have fewer dreams.

"If you need an alarm clock to awaken you then you need more sleep," the slumber expert said.

May Enlarge Power Plant

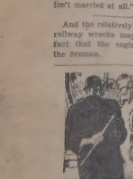
The Saskatchewan Power Commission is considering an addition of machinery to the Saskatoon plant, to cost in the neighborhood of $400,000. No additional buildings, however, would be required. Construction of additional transmission lines throughout the Saskatoon district necessitated the enlargement of the plant.

Under a law of 1787 James McGhee was fined $50 at Cushendall, Ireland, recently, for shooting game on Sunday.

"My brother is very intelligent. He has married a teacher."

"My brother is more intelligent. He isn't married at all."

And the relatively small number of railway wrecks may be due to the fact that the engineer never hugs the fireman.



Wife: "Why are you sad?"
Financier: "I've lost £1,000, and £5 was mine."—Buen Humor, Madrid.

No. M. U. 1884

British Wholesale Society

May Establish Packing Plant In Western Canada

The Toronto Globe publishes the following despatch from Ottawa:

"Representatives of the Co-Operative Wholesale Society, with headquarters at Manchester and hundreds of stores throughout England, had a conference with Hon. Robert Weir, Minister of Agriculture. It is understood the "Co-Op," as it is popularly known in Britain, is contemplating establishment in Canada. The visitors also are looking over the ground to see what they can purchase from the country in the way of food products.

"Their packing plant may be established in western Canada. H. S. Arkell, superintendent, and J. M. King, secretary of the Canadian Livestock Co-Operatives, accompanied them."

Ultimate In Efficiency

Big Steel Company Returned Two Cent Excess Postage To Customer

A New York statistical organization recently wrote the U.S. Steel Corporation requesting a copy of its forthcoming annual report. Being meticulous in such matters, it enclosed two 2-cent stamps to cover the mailing. The corporation is no less meticulous. A prompt reply stated the report would be mailed when issued and returned one of the 2-cent stamps.

When a company with a total assets above $2,200,000,000 finds the return of an extra postage stamp not to beneath its notice the ultimate in efficiency and courtesy is indicated.

623

THE JACKET DRESS PROVES ITSELF

The jacket suit of plain or printed flat crepe or lightweight woollen holds a prominent place in the spring mode.

No wonder for its popularity. It is so thoroughly comfortable, chic and practical.

The simulated tuck-in blouse is youthful in this crepy woollen suit with crepe silk blouse. The scalloped collar and jabot frill are softly flattering. The hips of the comfortably full flaring skirt are snugly fitted with a shaped yoke.

Style No. 623 is designed in sizes 16, 18, 20 years, 36, 38, 40 and 42 inch bust.

Size 36 requires 4¼ yards of 39-inch material with 1⅞ yards of 39-inch contrasting.

Red and white printed crepe silk with white crepe blouse is refreshingly youthful.

Light navy, blue crepe with white is exceedingly smart.

Printed cottons and jersey also suitable.

Spring, the season of prettiest styles, will soon be here. Prepare now by ordering a copy of our new Fashion Magazine. Attractive styles for women, misses and children. And instructive lessons in sewing.

Price of book 15 cents.

Price of pattern 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Poultry specialists have found that just about half the cost of producing eggs goes for chicken feed.

SUNDAY SCHOOL LESSON

APRIL 12

THE PRODIGAL SON

Golden Text: "There is joy in the presence of the angels of God over one sinner that repenteth."—Luke 15. 10.

Lesson: Luke 15.

Devotional Reading: Isaiah 51.3, 2. 6-11.

Explanations and Comments

The Parable Of the Prodigal Son, the Son Sinning and In Want, the Son Returning, the joy of a father in a son, the pain of a prodigal in soul, the pain of others. Give me the portion of goods that falleth to me."—James Reid.

How far will selfishness carry one if he follows it to the end? It carried the prodigal steadily downward. In his folly he left the wayward life and his reckless fling. He becomes as irresponsible as a reprobate—he wastes his substance with riotous living. He loses his fine feelings, his friends, his good food, his good garments, and at last he comes to a field and the company of swine. Even the husks or pods of the carob tree given the swine are welcomed as food, for he is in sore want.

Honest living may have for us no future, but we may be guilty, nevertheless, of squandering our portion, he had left him the situation, time, opportunity, life.

"He Came To Himself, verses 17-19.—Referring to Swan's great picture of the Prodigal Son in the Tate Gallery, London, Alfred Austin Watkinson said: "It is a masterpiece. The prodigal has himself in a most melancholy figure, and as for the swine they are in fact, dangerous and diabolical beasts. But what struck me most of all is that the great painter had put in a few dark days. That is the poetic touch. In his dark picture Swan has painted in the red poppies." There is a bright spot in the dark picture of life available—the prodigal "comes to himself."

The Return and the Father's Forgiveness, verses 20-24.—The prodigal immediately carries out his high resolve. He returns in rags and tatters, a gaunt and unkempt vagabond.

"It is often a long journey from a resolution to its realisation. The journey is frequently so long that it is never completed, and the resolve never becomes a reality. This is true because in so many instances the good resolution has nothing to back it up except a fateful act, and a weakened will. In the will of the prodigal there was still life and power."

We can picture him as he travels the long road, stretches back to his home, rehearsing in his mind the appeal he proposes to make to the one will his father receive him? He has ventured on a greater hope than to be received as a hired servant. But his father's love is far larger than he dreams. When he is yet afar off his father sees him and is moved with compassion; he runs to meet and kiss him.

"Yet a great way off he saw me, ran to kiss me.
As I was my father loved me, loved not in my sin and shame."
—Tertigeen.

Settle Vast Estate

Estate Of Sir George Wills Nets British Treasury $5,000,000

An estate of more than $10,000,000, nearly $5,000,000 of which has been paid to the treasury in death duties, was left by Sir George Alexander Herbert Proctor Wills, member of the famous Bristol tobacco family.

This family in the last couple of generations probably furnished more millionaires than any other in England. Their ability to amass wealth was equaled only by their readiness to spend a goodly portion of it on things for the common good, especially in bristol.

Farm Probe Planned

Enquiry Into Farm Economic Conditions In Manitoba Is Authorized

Manitoba legislature has directed its agricultural committee to institute an enquiry into farm economic conditions in the province with the view to recommending to the House methods for giving assistance and protection to agriculturists.

Many farmers were unable to meet their obligations and, as a consequence, their land tenure was precarious, Douglas L. Campbell, government member for Lakeside, said in moving the probe resolution.

Awarded Segrave Trophy

The Segrave Trophy, given each year to the British subject who accomplishes the most outstanding demonstration of the possibilities of transport by land, air or water was awarded to Wing-Commander John Kingsford-Smith. The award was made for his trans-Atlantic flight and his flight from England to Australia.

Wear On Shoes

The U.S. Bureau of Standards in Washington, D.C., has a washing machine for testing the life of shoe leather. In 24 hours the machine gives the equivalent of several months of wear to a pair of shoes, while observers study the reaction of the leather to the severe strain of the test.

Morocco plans to develop its coal and iron ore resources.

Dream City May Be Abandoned

Government Finds Upkeep Of Canberra Is Too Costly

Abandonment of Canberra, Australia's federal capital dream city which cost $26,000,000 to date, was urged by many leaders in public life and business men.

Described by some politicians as "the nation's symbol of unity," and by others as "a running ulcer of finance," it would be returned to the sheep which once grazed on the broad acres if a widespread movement prevails. It is isolated and its maintenance is costly. Its roads, gardens, public buildings, hotels and homes are amongst the best in Australia, but because the city was designed to accommodate a population a big population, its buildings are scattered over 900 acres.

There are no street cars, and to walk a mile is a chore. Water supply, drainage, sewerage, and everything else is lacking in the grand and at a grand cost. A temporary parliament house cost $3,200,000.

Five hotels costing over $3,000,000 were built but for two years three of them have been closed. The palatial hotel Canberra is frequently without a single guest, when the parliament is in recess. Its big staff, brought from England, has nobody to serve.

Five million dollars was spent by the government on houses, but many of them are empty. The countryside is littered with the foundation stones marking the spots where great buildings are to arise in the dim future. All the stones bear in gilt letters the names of politicians.

Those who would abolish it say Canberra was built only because of interstate jealousy and rivalry. It is apparent what a burden Canberra is and will be, all would be satisfied if the federal parliament sat in either Melbourne or Sydney.

Finishes Long Term In Newspaper Work

Ninety-Year-Old Woman Reporter On Paper Since 1879

The oldest newspaper woman west of the Mississippi—and the first—has laid down her pencil. Mrs. J. M. Patterson, resigning as reporter for "The Farmers' Journal" of Calhoun, Mo., on her ninetieth birthday, wrote "30" at the bottom of the last of a series of copy she had begun fifty-two years ago, saying:

"I'm going to rest from now on." She added: "The Farmers' Journal News" published its first issue—having been established to satisfy Mrs. Patterson's desire—the aged woman has missed hardly a day in all that time.

Her connection with newspapers, however, dated beyond the fifty-two years of existence of the Journal News." On October 20, 1857, she married J. M. Patterson, who at that time was editor of a paper in Warrensburg, Missouri.

A few years later, with the outbreak of the Civil War, the Warrensburg plant was demolished, and Patterson, after holding a series of reportorial positions, landed on "The Sedalia County Democrat" at Sedalia. J. C. Patterson, the son, grew weary of working for his father's paper, and went to work for Mrs. Patterson told him that if he would remain in Marshall she would help him start a newspaper, and aid in gathering the news. The paper came into being June 28, 1879. Since that time, Mrs. Patterson says, every week has been written and copy written by her, in longhand on the copy paper, for she never learned to use a typewriter.

Rapid Telegraphy

Method Of Sending Message At Rate Of 90,000 Words An Hour Is Demonstrated

A method of transmitting facsimile messages at the rate of 90,000 words an hour was demonstrated for the first time at the laboratories of the International Telephone and Telegraph Company, in London, England, recently. Roughly, the method used is to put a typewritten or printed page under a scanning beam which records the image on sensitized paper in the receiving machine at the other end of the circuit.

The device can transmit over radio, land, telephone lines or any line capable of carrying the voice, but not overseas cables. Its use is confined to black and white. It will not reproduce half tone.

Saskatchewan Bronze Turkeys

W. E. Sellers, of Strasbourg, Sask., who has been showing his bronze turkeys at the fall and winter poultry shows again this year, has had another successful season. At the major shows held at Winnipeg, Saskatoon, Yorkton and Moose Jaw, his wins with turkeys include 7 firsts, 7 seconds, 3 thirds, 4 fourths, 2 fifths, 2 silver cups, 4 specials and 3 championships.

Condensed Milk Sales

The consumption of condensed milk in the three Prairie Provinces in 1930 reached the large total of 270,000 cases, as shown in a report of the Saskatoon Board of Trade. Manitoba used 60,000 cases; Saskatchewan, 64,000, and Alberta, 150,000.

E. P. Prize Winners

Blooded Cattle From Royal Ranch To Remain In B.C.

"Sell it to them, but don't stick them, Carlyle," are the instructions the Prince of Wales gave in regard to his prize winning cattle, Professor W. L. Carlyle, manager of the Prince's Alberta ranch, told cattlemen at a luncheon in Kamloops. The speaker was announcing that the Prince's winners at the Kamloops bull sale would be left in British Columbia.

"That is one of the purposes of the E. P. Ranch," he said, "to circulate good blood in western herds."

With the hugs, snorting, roan bull from the ranch of His Royal Highness in the lead, Alberta bulls took most of the honors from British Columbia at the sale. In the class of Shorthorns 18 months or older, the Prince's entry was first and was later led back into the ring to receive the ribbon of champion.

H. Pollard, of Vernon, B.C., was a close second to the Prince, in the first class. In the second class, Charles Yule, Carstairs, Alberta, and R. J. Espley, Ladner, B.C., were second and third respectively.

Frank and George Collicutt's famous Alberta white faced winners captured first in Hereford under 18 months, the reserve championship and other prizes.

Discounts Russian Wheat Menace

Predicts That Within Five Years There Will Be a World Glutted For Wheat

The dark shadow of Russia on the wheat marketing picture will vanish gradually.

Within five years, there will be a world clamor for Alberta wheat.

Such were two of the main points in an optimistic address, delivered by Premier J. E. Brownlee, at the annual banquet of the Alberta Association of Professional Engineers in Edmonton. At the time he was replying to the toast to "The Province of Alberta."

Declaring that Russia was at the lowest margin upon which human life survived, Mr. Brownlee said it was evident that country would move to higher standards of living.

Queer Place For Chapel

Four Bridges In England Have Church On Them

Wakefield's historic bridge over the River Calder—one of the four bridges in England to have a chantry chapel built upon it—is to be relieved of the burden by the erection of a new bridge near by.

Such a bridge has long been necessary, since the present one is much too narrow to accommodate the heavy stream of traffic flowing between Leeds and Sheffield. The present bridge is to remain with its famous chapel in its historic position. The chapel has been used as a bacon factory, an old clothes shop, a library, a dairy, a corn factor's office, a jail and, since its restoration in 1842, as a church.

Tourists Favor Saskatchewan

Enquiries already being received at the Saskatoon Board of Trade from persons below the border indicate they spend a holiday in Canada make it likely that the Province of Saskatchewan will be favored beyond the usual this summer, according to "The Hub."

Some grades of silk have been cheaper in London recently than they have been for 100 years.

Delegation May Bring Better Trade Relations

Increased Business With Argentine May Result From Visit

The visit of the Canadian trade delegation has aroused the press of Buenos Aires to comment very favourably on the prospects of closer trade relations between the two countries.

It has even been suggested that negotiations be initiated for a mutual understanding between the Argentine and Canada on the all-important question of marketing wheat. Both countries, it is pointed out, would greatly benefit by such a move, although a basis of any such agreement has not yet been suggested.

Cordial discussions took place over a week-end between members of the Canadian delegation and representatives of the Argentine Government. Arising out of these discussions, it is understood anticipated that very profitable future business will result for both countries.

This Motorist Was Lucky

Train Smashed Car But Driver Escaped With Minor Injuries

Motorists who race locomotives to grade crossings seem to be blessed sometimes with an amazing good fortune. The driver of an automobile in the Southern States, recently was hit amidships by a yard engine. His life was saved by little short of a miracle. The locomotive crushed the wheels of his automobile, the chassis of the car dropped to the railroad tracks, and the automobile and driver were pushed along the track at a good rate of speed for more than 150 feet. The driver escaped with minor cuts and bruises. He collected the spare parts of his automobile, and added by the railroad wrecking crew completed to get his smashed motor car to a vacant lot.

Branch Line Construction

Construction Programme Of C.N.R. Is Proceeding As Authorized In 1930

All the branch lines of the Canadian National Railways authorized for construction in 1927, were completed by the end of 1930, according to a return tabled in the House of Commons by Hon. R. J. Manion, Minister of Railways. Last year $822,360.97 was spent to finish the work, making a total spent on the 14 branches authorized of $18,127,760.93.

Construction is proceeding on the branch lines to which parliament gave authorization in 1930. Seventeen of these account for an expenditure of $15,232,716.06 last year. For the current year the work will cost an estimated figure of $3,760,000.

Have Queer Job

A group of girls employed by a rubber goods concern at Naugatuck, Conn., make their living by walking and rain. Wearing the latest fashion in rubber footwear, they tramp the streets to subject them to winter weather tests. They are paid by the hour.

Canada's Fresh Water Area

More than half the fresh water of the globe is contained in inland waters of Canada and twenty different varieties of food fishes are obtained from them in abundance by commercial fishermen each year. Inland commercial fishing is carried on in six provinces and in the Yukon Territory.

A new device to lock the keyhole as well as the door, is said to prevent any intruder from inserting a skeleton key.

RASHES VANISH QUICK
"My face was covered with itching rashes. One application of 'Soothe-Salve' ended the itching. It cleared my skin in a few days." That's why "Soothe-Salve" today. All druggists.

BLACKHEADS

Don't suffer any longer from these unsightly blackheads. Overcome them at home! Get 2 oz. Peroxine Powder from your druggist. Sprinkle a little on the face, dark, apply a circular motion and the blackheads will be all WASHED AWAY. Satisfaction or money returned.

Free Port Motion Defeated

Amendment To Safeguard Western Agriculture Passed By Alberta

Side-tracked in favor of an amendment proposed by George McLachlan, U.F.A. member for Pembina, more directly concerned with "safeguarding" western agricultural interests, than with the original motion, the resolution proposed by W. R. Howson, Liberal member for Edmonton, urging that Port Churchill be made a free port of entry for British goods for bona fide consumption in Alberta, met a dreary fate in the Alberta legislature.

Mr. MacLachlan's amendment, which was substituted for another amendment proposed by Col. F. C. Jamieson, Conservative member for Edmonton, read:

"That this assembly hereby affirms its support of all efforts to encourage reciprocal trade between Great Britain and Canada and to the substantial extension of the British preference to encourage such trade."

"That pending a general substantial revision downwards of all tariff, this assembly recommends to the Dominion government that the agricultural industry of western Canada be placed on a parity with other industries by stabilization of prices or by careful examination of the incidence of the tariff schedule in order to see that the economic interest of the farmers of western Canada be adequately and justly safeguarded."

Unemployment Relief

Impossible For Country To Continue Present System Indefinitely

Is the country going to continue indefinitely the existing wasteful and uneconomic system of relief? Premier Bracken is reported to assume that the percentage of unemployment next winter will be any less. The country has provided and the cities cannot continue indefinitely expending millions of dollars in direct relief or in public works that are unproductive. A more business-like system will have to be devised for looking after men out of work, and the time to prepare for next winter is now. It may be some years before the problem of unemployment disappears and we have devised a method of solving it will have to be evolved.—Calgary Herald.

How Poland Does It

The American idea of instalment buying has been adopted in Poland in such a degree that even a pair of shoes is now commonly bought with a series of promissory notes. Many of these notes are unpaid when due, and the courts become clogged with cases of notes protested for one reason of another. In a recent case a protested note bore 154 indorsements, and the tribunal had a delicate task distributing the responsibility.

The milky way of the heavens is said to contain approximately 30,000 million fixed stars.

Make Your Windows Pay
Invest in WINDOLITE Windows and you will be repaid a hundredfold in the health of your Poultry and Live Stock
WINDOLITE
THE ORIGINAL GLASS SUBSTITUTE
MADE IN ENGLAND SINCE 1917 ON ORIGINAL PATENTS
This unbreakable glass substitute is light and flexible, easy to cut and fit, will withstand extreme changes in temperature, keeps out cold and wet, but allows the full sunlight to enter, including the health-giving Ultra-Violet Rays, which do not penetrate ordinary glass.
CUT DOWN YOUR LOSSES BY INSTALLING WINDOLITE
USE WINDOLITE IN BROODER HOUSES LAYING PENS DAIRY BARNS SUNROOMS ETC.
Canadian breeders of poultry and livest ock are finding Windolite a most satisfactory and profitable investment. Young chickens and turkeys are entirely free from leg weakness and disease and will thrive in confinement under Windolite. Windolite comes in rolls any length, but 36 inches wide only.

CHAPTER XIV—Continued.

"Emily we go straight home, or would you like to ride for a few miles? It's a splendid day."

Angela laughed.

"Mow polite and considerate we are all of a sudden! It's a long time since you've asked me to ride with you, my dear."

Her tone was sarcastic, but Hallidayhad refused to take offense, though he did not speak till they had left the town behind and entered a stretch of road that led through the pine woods. He drew a deep breath then, and stopped the car.

"Aren't these pines wonderful? I wish we had a lunch and could stay all day. Would you like to get out and follow that path a way?"

"I certainly should not, in these shoes. They pinch like anything. I never was one to enjoy prowling in the woods, you know."

"There is time," he began, when with an impatient gesture she interrupted.

"Oh, then! What do you expect of a girl at a time like that? I was merely following your lead—doing the thing I knew would attract you. Did you expect me to keep it up? I can't see that you've continued trying to please me as you did in those days."

"What about this last week?"

He spoke evenly, and she flushed.

"I suppose that's a criticism of my friends. You always do criticize them. I'll have you know that the Myers are worth cultivating. They've got money to burn—oil wells in Oklahoma. They have a magnificent place in Pasadena, and have asked me to visit them next winter; but because they don't happen to like the things that you like, I can see that you scorn them."

"Angela," said her husband quietly, "do you enjoy these scenes you so often thrust upon us?"

She shrugged and said: "So the fault is always mine?"

"I'm afraid it is, my dear, for when I unwittingly arouse your anger I am sorry."

"Unwittingly? There've been times when you've goaded me to it!"

"I know. I'm sometimes hateful; but I'm trying to do better. Won't you help?"

She looked at him, puzzled.

"What do you want to get out of me?" she asked.

He sighed, and would have started the car had not she stopped him.

"Look here—if it's about having that child come back to the house you can save your breath. We'll settle it here and now. I hate to look at her. It reminds me of that awful ride in the rain, and how terrible she looked lying across my lap in those dirty, blood-stained clothes. Why her ears weren't even clean, nor her finger nails! I can't forget it. I wouldn't touch her for a hundred dollars. It was ridiculous your bringing her here. As for your sending her to the Hamiltons, I should think you'd be ashamed to ask a favor of such mere acquaintances."

"I consider them more than acquaintances. I saw a good deal of them while you were gone; but in any case I shouldn't have hesitated to ask a thing like that of Mrs. Hastings. She was glad to do it as I was glad to open my house to the child whom you had hurt."

"Well, she's not hurt now. There's no reason for keeping her any longer."

"There's an excellent reason. You will laugh, I know, but I happen to have grown fond of the little thing."

Genuine surprise,—Angela's face. The last laugh was based upon a joke. It's laughable. What would your Back Bay mother have thought of that?"

"Well, she's not here," he answered soundly, and his lips tightened.

"Isn't it something new for you to consider my mother's viewpoint on any subject? I shall do well to refer to the little girl in those unpleasant terms."

"I'm very well, but if you expect me to vacate my room——"

"I don't ask that; but there's an unoccupied guest room, isn't there?"

"There is, and it continues to delightfully paying a trained nurse to look after that impossible child?"

"That won't be necessary much longer. We can get someone else, though Julie is fond of children and would be glad to help when help is needed. Martha does a good deal for herself, though she's such a baby. She hasn't been used to the tender care of the passing years."

"And for her own good she'd better not get used to it now," said Angela, her anger rising. "How long, may I ask, do you plan to keep the child?"

"Always—unless my wife makes it impossible."

"Well, she does."

"In what way?"

"She can choose between us—that's all."

"You don't mean that, Angela."

"I never meant anything more. Why, you'll be adopting her legally next!"

"I had thought of that," Halliday admitted quietly.

"Do you realize what you are saying? You adopt her legally, and at your death she gets the better part of your property. Do you call that fair?—a mere State ward who comes from the very dregs of the earth?"

"Dregs? She was once back in Halliday's face as he replied: "There is no reason to count on my early death, my dear. I come, perhaps unreasonably, of long-lived stock."

"Well, I have told you to choose. If the child comes, I go. That's all."

"No," said Halliday sternly, "that is not all. To be fair to her, and positively she moved away, as if in fear that his words might hurt her physically. "You're going—and you are not going. You will not go because, when you think it over, you will see that by doing so you will gain nothing, and lose much. The name of Halliday shall remain untainted. I did not give it to you lightly, and you shall not cast it aside. Where would you stand in a divorce court should I tell the things I could tell? Answer me that."

Her face grew white.

"You—you wouldn't dare."

"I am no coward, Angela."

"But—I am your wife. You—you wouldn't—desert me."

She raised her eyes, and he saw in them a subtle fear of him that was, he knew, the only weapon he possessed. Yet, the past memories flooded back upon him, he hated that weapon as he had never hated anything in his life.

"Angela," he said gently, and his voice softened, "Angela—my dear—why have we grown so far apart? If I am different from the man you married, what has made me so? Isn't the love we once had for one another worth anything to preserve? Won't you try—as I have been trying lately, to—to——"

He hesitated, but the plea that should have come from her heart only brought back his wife's lost poise. This was familiar ground — her ground. She laughed and answered, not caring that her words hurt him cruelly: "So you thought that I loved you? Really, Jim, after those hateful years you've written I suspected you of more understanding of human-kind—or should I say, my kind?

"As for this quixotic idea about the child—you will end by doing as you please. You always do. But don't expect any help from me. I won't raise a finger for her. It's fortunate we kept the Reston apartment. I'm tired of Bakersville and everyone connected with it."

"Including me?"

Angela only shrugged.

"Thanks," said Halliday, as his mouth dropped into its cynical lines once more. "In that case there is nothing further to say."

He started the throttle and turned the car toward home.

(To Be Continued).

Restriction Of Credit

Alberta M.P. Points Out Gravely Of Existing Economic Situation

"Regrettable feature of the present situation in the west is the unwillingness on the part of the banks to extend necessary credits, even for the purchase of food and clothing," said Edward J. Garland, M.P. for Bow River, and prominent member of the United Farmers of Alberta, in an address before the Empire Club, at Toronto.

"No one has the situation been as grave as it is today," he said. "As long ago as October there would appear to have been general instructions had been sent out to western branch bank managers, ordering the contraction of credits, and almost an entire suspension of loans. The farmers have been unable to borrow even for the purchase of binder twine, to pay threshing costs, or even buy food," he said.

"Advice is one thing we have received in abundance," he continued. "This has been poured upon us from every conceivable corner. The western farmer feels like a man caught in a trap. The only remedy something for him to do, as we all know, is to stand still and, if he has time, to write his will on a visiting card."

Some Of Tallest Men

Biggest One In Twentieth Century Was a Russian

"In the Bible we read that the bedstead of Og, king of Bashan, was nine cubits long and four cubits broad, he lived 1451 B.C., records Charles Duff (in "This Human Nature.") "Goliath of Gath—who was killed in battle by David—was not far off ten feet in height. Pliny tells us, "The tallest man that hath been seen in our age was named Gabbara, who, in the days of Claudius was brought out of Arabia; he was nearly ten feet high." The biggest man in the world both century was Machnow, the Russian, who at the age of twenty-three years, was nine feet eight inches, and weighed 448 pounds."

Persian Balm is irresistibly appealing to all women who appreciate charm and elegance. Its use keeps the complexion always clear and beautiful. Tones in effect. Stimulates the skin and makes it wonderfully soft-textured. Softens and whitens the hands. Persian Balm is equally invaluable as an excellent hair fixative and cooling shaving lotion. Splendid also to protect the tender skin of the child.

World's Best Oysters

Oysters From Prince Edward Island One Of the Finest In the World

Oysters from Prince Edward Island are the finest in the world, according to Hon. E. N. Rhodes Canadian Minister of Fisheries. In a recent address made in Montreal the Minister stated that there is a little bay in Prince Edward Island which is completely filled for oysters. In this oyster bed of 600 acres, which is only one-fifth of the whole area, and taking only one-quarter of the maximum crop that can be raised per acre, a yield of 1,500,000 barrels of oysters in a year, representing a return of $10,-000,000 for the year. Even one-tenth of this would be a small part of the smallest province in Canada.

Rust Carried By Wind

Sample Of Wheat From Fort Churchill Badly Attacked

One of the interesting things which S. J. Sigfusson, of the Brandon Experimental Farm, shows his visitors is a sample of Garnet wheat grown at Fort Churchill in the summer of 1926. The season of Churchill is too short to ripen wheat, hence this sample had to be cut before maturity. The interesting thing about it, however, is that it is so badly attacked by rust that even if the season had permitted it to grow to ripen, the grain would have been practically useless for milling. As this sample was grown several hundred miles away from the nearest wheat crop, it gives an indication of the thoroughness with which infection may be carried by the wind.

An inspector was examining a class of pupils.

"Tell me, children, what is wind?" he began.

There was silence for a moment, then a little boy stood up.

"Please, sir, air in a hurry."

Editor—What do you mean when you write, "The statement is semi-official?"

Reporter—Mrs. Gibson, wouldn't talk, so I got the story from her husband!

The joke writer has a funny way of making a living.

WHY FAT MEN STAY FAT

"The trouble with me, and I guess this applies to 99 out of every 100 men who are putting on weight, I didn't get enough energy or 'pep' to keep it off. Lost all interest in my healthy activity and just hated around accumulating the old pounds, until I got that 'Rundown feeling.'"

Start taking Kruschen Salts—that's the commonsense way to reduce—but don't take them with the idea that they possess reducing qualities in themselves.

This is what they do—they clean out the intestinal tract, help to keep it clean, the bowels, kidneys and liver in splendid working shape, and fill you with vigor and lifeless energy.

It's a gratifying feeling of planting yourself in an easy chair every free moment and letting flabby fat accumulate, you feel an urge for activity that keeps you moving around doing the things you've always wanted to do and needed to do to keep you in good condition.

Kruschen Salts are the up-to-date health treatment. Take a half teaspoon in a glass of hot water the first thing each morning—remember—be careful of the foods you eat—take exercise—then watch the pounds slide off.

FREE TRIAL OFFER

You can never used Kruschen—try it now at our expense. Write to Kruschen Salts, Limited, 4 Agnes St., Windsor, Ont., and we will send you a trial bottle free. It is easy for you to prove our claim for yourself. Kruschen Salts are sold by druggists the world over. Large bottle, 75c; bottle together with free booklet, "Health and Beauty," sent C.O.D. or postpaid on receipt of price. Important Medicine Mfrs., Ltd., Toronto.

Medical Experts Give Idea On Rejuvenation

Say Cold Shower Baths Best Restorative For Failing Blood

Medical experts say that regular cold shower baths will do more to rejuvenate a man than all the monkey glands on earth. Dr. Serge Voronoff, noted Battle Creek Sanitorium medico, told doctors meeting at the convention of the American College of Physicians that cold baths are the best restorative for failing tissue that has yet been discovered. He and Dr. Bernard Glueck say that "in course of short, cold baths would do far more to rejuvenate a man than transplantation of glands or taking of glandular secretion extracts or serums."

SELECTED RECIPES

CORN CHOWDER

8 tomatoes.
2 cups boiling water.
1 small onion.
2 cup milk.
1 cup raw diced potatoes.
1 cup corn pulp.

Cook the finely chopped onions in the hot water with the potatoes, then add the corn pulp, the "Masola" and the corn starch dissolved in the cold milk. Cook until the corn starch has thickened. Salt and pepper to taste.

An efficacious household remedy — Douglas' Egyptian Liniment. Brings immediate relief to sufferers from muscular rheumatism. Also relieves inflammation, burns, sores, corns and warts.

Two Trees To a House

A single Sitka spruce tree may contain 8,000 to 10,000 feet board measure of lumber, says Inspector of the Forest Service, Department of the Interior. The quantity of lumber used in building an ordinary five or six roomed house is estimated at 15,000 feet, hence two good-sized Sitka spruce trees would suffice for the house. The yield of 1,500,000 barrels of oysters in a year, representing a return of $10,-000,000 would be sufficient for a small part of the smallest province in Canada.

Battleship To Be Scrapped

If Nations Keep Faith Destroyer Like "Tiger" Is Not Needed

H.M.S. Tiger, last of the coal burning battleships of the British Navy, is being scrapped. Many who read the news will look back with mingled pride and regret to the days of Jutland—pride that the "Tiger" played such a splendid role in that momentous fight, and regret that one of the finest ships of the Navy should pass from the scene.

There is always something that touches national pride in the elimination of one of the bulwarks of Britain's seagirt coasts. That is only natural. Yet there is another side to the picture, and it is a side that must not be overlooked. The "Tiger" passes, her work accomplished, and those who served upon her will cherish always the thought of duty done. But the "Tiger" will not be replaced. The world's desire for peace has become the biggest universal factor humanity has known, and the need for the biggest navy has ended—we hope for all time. Other ships will be built, due course as commissioned and will go on their ways through the seven seas, but their ways will, we trust and believe, be those of peace. There will be no need, if nations keep faith, for any navy in the future to possess such huge engines of destruction as the "Tiger."

But the world is not yet sure of itself; the Great Powers do not yet feel quite safe over at the thought of reconstruction, and that can only come about by a proof of as much willingness to disarm upon land as upon the sea. It is a long road that lies towards which to labor, and though those at present engaged upon it may not live to see the fruition of their efforts, they will at least know that they have not labored in vain. So while we note the passing of the "Tiger" with regret we can look forward hopefully towards a new day when she and all her class will be but memories enshrined.

Little Helps For This Week

"The Lord redeemeth the soul of his servants: and none of them that trust in Him shall be desolate." — Psalm xxxiv. 22.

And so beside the silent sea,
I wait the muffled oar;
No harm from Him can come to me,
On ocean or on shore.

I know not where His islands lift
Their fronded palms in air;
I only know I cannot drift
Beyond His love and care.

—John Greenleaf Whittier.

To trust is the longest step Godward that any of us can take. We cannot by searching find out God; we can only get nearer to Him as we can come to us. He who trusts, who believes, knows God.

—Theodore T. Munger.

New Cure For Cold

Scientists To Make Further Tests Of Effects Of Vitamin "A" On the Human Body

New field for study of the common cold may be opened through further tests of effects of vitamin "A" on the human body, the American College of Physicians was told at Baltimore.

Dr. E. V. McCollum, of Johns Hopkins University school of hygiene said present not receiving sufficient vitamin "A" in their diet have discharges from their nose and sinus membranes similar to discharges of the latter stages of the common cold.

Vitamin "A" is found in egg-yolk, milk, cod liver oil and vegetables, such as lettuce.

For years Mother Graves' Worm Exterminator has retained its reputation as worm preparation and it always maintains its reputation.

Alberta Coal Operators

Meeting In Held To Form An Organized Marketing Body

At a recent meeting of coal operators in the Province of Alberta, representing 47 per cent. of the mines, and 65 per cent. of the tonnage of domestic coal, an organized marketing body was formed bearing the name of the Alberta Domestic Coal Operators' Association, with C. Cook, of Drumheller, as president, W. W. Morgan as vice-president, and C. G. Durham as secretary-treasury.

Made Her Weary

"I'm very tired," said the lady at the head of the supper table one Sunday evening.

"You should not be," said her minister, who had been asked to the evening meal, "you haven't preached two sermons today."

"No," said the lady, absent-mindedly, "but I listened to them."

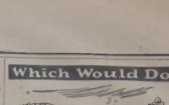
Radio Sets In Canada

At the end of February of this year, the official registration of radio sets in Canada totalled 309,758, an increase of 81,612 over the aggregate number of radio licenses issued at the end of February, 1930.

The world seeks most of its ivory supply in Africa, because the tusks of African elephants are larger and the ivory is of better quality.

When in a pickle act as cool as a cucumber.

Which Would Do Most Work?



Long Hair is like a blanket. Leave it on and your horses sweat excessively and all night this cold wet blanket of long hair chills the horse and prevents proper rest. Horses in cool, open conditios are easy prey to colds, pneumonia and other ills.

Remove the long hair. Clipping your horses now. Use 10 horses—they do more work on less feed—are dry at night and get proper rest. Clipped horses sweat properly, are less subject to illness, always fit for full day's work. Keep your horses on the job. Clip NOW.

New Stewart CLIPMASTER
an electric clipper for clipping horses and cows, weighs only 3¼ lbs. and easily held in hand like a grooming brush. Works from light socket, has 7½ ft. attachment cord, special universal motor. 1/4 Price, complete, only $28.75.

Flexible Shaft Co. Limited Factory and Office: 349 Carlaw Ave., Toronto

STEWART No. 3 Clipping Machine, Clips fast. Lasts a lifetime. Has enough power to handle the heaviest draft horse. Clips close. Runs smooth and quiet. Price only $39.50.

If your dealer cannot supply STEWART, send $1.00 and $1.60 to factory, pay balance on arrival. Satisfaction or Money Refunded.

STEWART

The ADVENTURES of CAPTAIN JIMMY and his Dog SCOTTIE

Now Jimmy Scottie and I were sound asleep by the time the sun had set on the ocean. Those of us who sleep outdoors know me whenever the times went down. I began to feel quite comfortable and warm. Somehow I choked for breath, and I was not conscious of anything for a partially asleep. Just what the trouble was I did not know, but I knew that I had been wakened by a terrible choking sensation that whirled and pulled at my throat. I choked and coughed and struggled partially awake.

For several minutes I could not imagine where I was. My eyes smarted, my throat was sore, and I felt as though I were in the midst of flames. Then, with the sharp smell of burning wood, I realized that I was choking in dense smoke. The trees were burning.

The gentlest task of the old Ark is to see to the fruits. A burning pang in the throat awakened me. I smouldered until fluffy flames burst into flame. The flames ate down and spread wildly, moving, and while I was still dazed by all that was happening, I was almost peacefully but noisily on. Next I began to make a fuss. To the south the valley narrowed down to a gap, a notch between two mountains. To the north it ended in a steep mountain. Between the two was a wide valley, and this valley was filled with the heavy smoke. It became hotter and hotter, and my eyes and throat began suffocating. "Scottie" says I, "I've heard a lot about fire, but I'll be darned if I better get ready to use it because we'll get wiped out." Scottie was sound asleep. At this time the fire seemed to be on both sides of the valley. The long grass of the valley caught fire, towards the north, and that was the direction in which we had a chance to escape. Heavy smoke rolled down the valley, and I could distinguish a great deal of noise.

Scottie was still asleep on my leather jacket to protect my skin, and had not and goggles to save my face and eyes. I snatched up Scottie, and holding him under my coat, started toward the north gap. Before I had gone far I found the grass had burned to ashes, and I could run through it. Soon I reached the gap and made my escape.

Girl Guides

New Headquarters Of Organization Is Opened In London

Girl guides all over the world have contributed in a thousand different ways to the new headquarters of the organization which was opened by Her Majesty Queen Mary, in London, England.

The building is in the vicinity of Buckingham Palace, and cost $1,250,000.

The Queen was received by Mary, Countess of Harewood (Princess Mary), who is president of the Girl Guide Association. The association numbers 895,000 members all over the world, with 519,000 of them in the British Isles.

What Canada Is Looking For

No better news could possibly be given out in Canada than that wheat promises to bring a higher price. Once the purchasing power of the agriculturists of Canada is substantially increased an improvement will take place immediately in the general business situation throughout the country.

Assertion Of Cleveland Scientist Is Startling

Says Leaders and Thinkers More Liable To Disease

Thinkers and leaders of modern civilization are more subject to diseases of the body than are other classes, Dr. George E. Crile, of Cleveland, told the Southeastern Surgical Congress at Atlanta, Georgia.

"Our leaders and thinkers are driving more mind fatigue than ever developed frontal lobe and are more subject to high blood pressure, goiter and other ailments. Man is the cause of the ills of his own civilization," the scientist said.

"Man's superiority over beings of the lower orders is due to the development of this higher organ; the animals are superior to us in sight, smell, strength, fleetness and in many other respects."

Money from the sugar and tea monopoly fund in Persia is being used for highway improvement.

Lead poisoning in English factories is being overcome.

CHILDREN CRY FOR IT—

CHILDREN hate to take medicine as a rule, but every child loves the taste of Castoria. And this pure vegetable preparation is just as good as it tastes; just as bland and just as harmless as the recipe reads.

When Baby's cry warns of colic, a few drops of Castoria has him soothed, colesp again in a jiffy. Nothing is more valuable in diarrhea. When coated tongue or bad breath tell of constipation, invoke its gentle aid to cleanse and regulate a child's bowels. In colds or children's diseases, you should use it to keep the system from clogging.

Castoria is sold in every druggstore; the genuine always bears Chas. H. Fletcher's signature.

Fletcher's CASTORIA

Aching CORNS STOP HURTING INSTANT RELIEF!

Just a drop or two of Putnam's Corn Extractor and the pain goes away. Relief is almost instantaneous. Removing corns with "Putnam's" is so easy, so sure, so painless—thousands use this wonderful remedy, and say it is the best. Don't suffer any longer, use Putnam's Corn Extractor, the one sure relief for sore corns. Sold at every drug store. 35c.

PUTNAM'S

ACID causes Headaches

PHILLIPS MILK OF MAGNESIA
For Troubles due to Sour Stomach, Sour Stomach, Constipation and Diarrhoea

When there's too much acid in your stomach, you must force yourself to work, and even pleasures are too great an effort. Appetite lags; the digestion is poor; the whole system suffers.

Laboratory tests show an acid condition is due to errors in our modern diet. But you need not wait to diet your way out of the trouble!

Take a tablespoonful of Phillips' Milk of Magnesia.

This will neutralize the excess acid instantly; make you feel like a new person in just a few moments.

Take a little whenever heartburn, sick headaches, nausea, flatulence, indigestion or biliousness show the digestive system is becoming too acid. Whenever you are taking cold or feel sluggish, weak, constipated, Phillips' Milk of Magnesia has a gentle, laxative action.

Delightful to take. Endorsed by physicians for 50 years and prescribed everywhere for men, women and children. The genuine is always a liquid; it cannot be made in tablet form. It always bears the name Phillips for your protection.

(Made in Canada).

BEAUTIFY YOUR HOME

Even a municipal tax is excluded home in Canada, whether large or small, can be made more attractive by the planting of trees, shrubs, vines and flowers and a well-kept lawn. While a fine rural district is the usual setting for a home, the beauty of dwellings in towns and cities is also to be considered, for there are many attractive homes which prove that a fine home in the centre of a community the surroundings of the

To say the town is of natural beauty is not to say that it cannot be made more beautiful. Nature does the first and second touch it may sometimes need the help of man. Nature is to be aided and not to be supplanted. Those who live in towns and cities are particularly sensitive to their surroundings and as they grow up will not be satisfied to want to leave the old home if it is unlovely. There is a difference between a house and a home. A Canadian farm should be more than just a farm, it should be a home in the country.

One often hears it said that it costs too much time or money and more flowers and shrubs. The truth is that it is not so much a matter of time or money as of disposition. If the farmer is disposed to have flowers and beautiful home surroundings, he will find that the time or money he may be out in the money spent for nursery stock required is one of the most profitable investments he can possibly make because such improvements will actually increase the money value of the home.

Canada is a land of great natural beauty and an appeal is being made this spring to all householders in every province of the Dominion to improve their home surroundings and thus help make a more beautiful Canada.

ANNUAL FEEDERS' DAY

The Annual Feeders' Day at the University of Alberta has been set for Saturday, April 11th, the last day of the Edmonton Spring Show Week. This arrangement allows visitors in the city attending the show to take in this event at the University.

A full day's programme has been outlined, based on the results of several years' experimental work conducted by the Department of Animal Husbandry with various classes of livestock. This includes studies to determine the most efficient rations and methods of feeding, the findings of which will be of personal value to all those interested in the production of livestock in the Province of Alberta.

To this event a cordial invitation is extended to visit the University on Saturday, April 11th. All sections will be held at the new livestock pavilion at the university farm.

The great pyramid is full of figures and dates. We are taking a look at these figures next Sunday at 12 noon in the Baptist Church. The greatest of the seven wonders of the world, will cause you well for any time you give to studying it. In the evening we are looking into the future. Perhaps you are more interested in the future than in the past; if so come at 7.30 p m.

"THE NERVOUS WRECK"

Brought here under the auspices of the Delia Hockey Club the play, "The Nervous Wreck," a farcical adventure in the Far West (by Owen Davis), was presented in the Olympia Theatre by the Craigmyle Dramatic Club to a large and appreciative audience on Thursday night.

The play was well staged, and much credit is due Miss Grace Dunham, who took the part of "Sally Morgan," and Dr. R. A. Hicks as "Harry Burnham," for the excellent manner in which they acted their leading roles, keeping the audience in roars of laughter with their witticisms from start to finish.

The story hinges around "Sally Morgan" whose father, "Jud Morgan," has promised the sheriff, "Bob Wells," that she will marry him, and the first act opens with Sally and Henry Williams. "The Nervous Wreck," stalled on the road over the mountain through lack of gas, the former having induced the latter to assist her in running away. Henry William's nerves are in apparent poor shape, judging by the quantity of pills he consumes and the avidity in which he disposes them. The play received some gas by a party of motorists whom he meets on the road, Williams holds them up and gets the gas, and after making "Jerome Underwood" crank his car, he and Sally hasten to Underwood ranch where, against their will, they are compelled to act as waiter and cook respectively. The arrival of the Underwoods, and later the sheriff, create various very funny situations which provoke plenty of merriment; but the outcome is that Underwood, Sally and the "Nervous Wreck" decide to get married despite the objections of "Bob Wells," the sheriff. The leading parts, "Sally Morgan" and "Henry Wells," were played in a pleasing manner by Miss Grace Dunham and Dr. R. A. Hicks respectively, who gave an excellent interpretation of the parts. S Crowe as "Jerome Underwood," had a difficult part to portray, which he acted admirably, and was ably assisted in the various roles by by Miss Margaret McDonald as "Harriett Underwood," his daughter; by Joe Kary as "Andy Nabb," the ranch foreman; "Mort," a cowpuncher hand, played by Gordon Newman; "Chester Underwood," played by Lafras Tillotson; "Dan," another ranch hand, played by Sydney Rees; and "Tim," the Underwood's chauffeur, played by Fred Dunham. The part of "Bob Wells," the sheriff, was given a first class characterization by Jim Adamson, and Arthur Wigley showed by that he was no novice at the histrionic art. The acting was of a high standard, and each and every one mentioned in the play portrayed their parts to a most creditable manner.

After the play a dance was held, which was well patronized, everyone thoroughly enjoying themselves till an early hour to the strains of the music supplied by Dot's Merrymakers.

Health Service of the Canadian Medical Association

CANCER IN WOMEN

The number of deaths from cancer can be reduced providing cases come under treatment early.

If every person were to go regularly, once a year, to his doctor for a health examination, disease, such as cancer, would be discovered early. That is one of the reasons why we say that it is most desirable for everyone to have a periodic health examination.

In order to secure early treatment, the patient must come to the doctor during the early stages of the disease. The doctor cannot go out and look for such cases himself.

What is it then that brings the woman to her doctor? Symptoms! If the woman does not go to her doctor regularly each year for an examination, the only chance for her to secure early treatment for cancer is to know something about the early signs and symptoms of the disease.

It is not possible for us to instruct our readers to such an extent that they will be able to diagnose cancer or any other disease. The most that we can do is to inform them that the occurrence of certain conditions is to be regarded by them as being sufficiently suspicious to send them to their doctor at once.

There are certain people who believe that such articles as this one do harm by arousing fear among those who have no cause for alarm. We believe, however, that the public is to be informed if lives are to be saved. If our readers will clearly understand that there are conditions other than cancer which cause similar symptoms, they will also realize that it is their doctor and not they themselves who must decide as to what the actual condition is.

More than a third of all cases of cancer in women develop in the uterus. Injury to the lower end of the uterus—the cervix—is not uncommon during childbirth. If such injury is not properly repaired at that time, there results a chronic irritation which predisposes to the development of cancer. Tears in the cervix that most cancers of the uterus begin.

It is evident that every mother should be examined several weeks after the birth of her child in order to determine if all the parts are normal and, if they are not, to receive the treatment which is necessary to restore them to normal so that chronic irritation of the cervix may not occur.

Proper care after the birth of the baby will also tend to prevent cancer of the uterus. Irregular bleeding, particularly after the menopause, should send a woman to her doctor at once.

If, in addition to paying attention to these points, women would go to their doctor promptly when there is any lump on or discharge from the breast, there would be a different story to tell about

An Attractive Offer for our Readers

Two papers which should be found in ever home in this community are offered you in an attractive money saving combination. Be sure to profit by it!

Parents and Their Children

(Issued under the auspices of Alberta division of the National Committee for Mental Hygiene, and the Department of Extension, University of Alberta.)

by WILFRID WEES

Camrose Normal School

Children Don't Grow Alike

Even Topsy did not "just grow." Topsy's character, like that of every other child, was a creation—created by his kindness, by his cruelty, by his kindness, by his cruelty, by his cruelty, by his habit, by habits created by the people around her, by the people around her. Topsy's character was a haphazard sort of structure, full of angles, and odd corners and hiding places; but it was sincerely more rambling, more tapestry-like, than many of the child creations built by parents in Edmonton, Calgary, Red Deer, Rose Town, or Gopher Valley.

When a child is born the building begins. Every kind word, every angry gesture, every smile—these are the tools that mould characters. Fathers and mothers, grandmothers and grandfathers, brothers and sisters, friends, lovers and enemies, stories, pictures, newspapers, movies and all sorts of businesses—these are the workmen. And habits, ideas, ideals, beliefs, prejudices, customs, hopes, ambitions, failures—these are the results. These are the walls, the rooms, the stairways of characters.

If the behavior of a child at any point in his life is the result of all the forces that have acted on him since birth, it is clear that parents should be able to determine what manner of man or woman he or she will eventually make. It is possible, however, there is no plan in the building of characters. The forces acting on the child are often a hodgepodge of smiles, caresses, blows, tempers, irritabilities, whims and sympathy, syrupy, and she result is the child is an inconsistent, illogical, unbalanced mixture, shyness, impulsiveness, smiles, affectionate and tears. Very few stop down and make plans for the orderly and systematic education and training of our children. We let the matter drift in chance, and the mood of the moment. We are not patient and persistent. We are not consistent. We follow one plan one day and another the next. More often we follow no plan.

Is it not time, one psychologist asks, that we should set about the matter of child training in a definite systematic and scientific manner? We use science in all the other important undertakings of life. The training of a child is about the biggest undertaking that anyone can attempt. Why not use science here, too? But, strangely enough, the training of a child is the one thing for which many of us think we need no preparation. Such an attitude is probably the explanation of the fact that we have made so little progress in child-training within historic times.

Canadian Exhibits Attract Attention

OTTAWA, March 31.—Canada is attracting considerable attention in the Empire's great display at the British Industries Fair in London and Birmingham. One quarter of the world is represented in the display, and Canada, in conjunction with 17 other countries, has spread out its wares to attract the eyes of buyers of all nations who attend the largest national fair in the world.

The displays are arranged on each side of a main street running the length of the pavilion, and Canada has the largest stand in the hall. She displays a rich variety of food products, however, apples, canned fruit, cheese, breakfast foods and fruit drinks. Canada has also taken big space in the Olympia building to show her manufactured goods.

Newfoundland has an exhibit for the first time and seal skins, salmon, and cod liver oil are her products. When Her Majesty, the Queen, visited the pavilion, she was so taken by the beauty of the seal skin furs that she ordered some to be made into collars and cuffs for a coat. Her Majesty also ordered some of the salmon, which is brine frozen by a new process, for the Buckingham Palace kitchens.

Island of Orleans—Island of Bacchus

The ship may be as old as the world—a relic, and only exist in memory of the Indian and the vision, but it is more than 300 years old.

"WE likewise found quantities of vines such as I have not seen, nor had seen nowhere else in the world and which led us to call the the 'Island of Bacchus'." Thus the Saint Malo captain, Cartier, who discovered the Isle of Orleans in 1535 first named it.

Four hundred years. Shipsof the adventurer, the explorer, the pioneer, the builder of empire and later, great ships of commerce have followed those of Cartier, but the Isle of Bacchus has not known them all and has slept before the portal of the new world for many generations. Not that it has been forgotten, but that the bigger ships have gone by. Industry has not destroyed its charm and today it remains, if not the pristine isle of Cartier, a piece of old France that has been left behind and followed him.

The illustrations above typify the island. "Progress" has been slow. Its people have learned the secret of content. Their tongue, their modes, their customs are a century ago. They weave their own cloth, their own homespun. They are blessed with good people. Yet, a short ferry distance away, Quebec with its ramparts, its Chateau Frontenac and its ocean shipping, keeps pace with the advance of the times.

At Ste. Petronille, one of the quaint little villages where even Quebec has its summer homes, an inn has this year been opened, so that it is now possible for the visitor to rest for a while and absorb at leisure the atmosphere of the forgotten island. But he must be prepared to eat of the good food provided, for the chef is the pride of the bonnepaun. The people of the island will welcome the visitor with open arms, for they have little liking for the moderns. They have no use for automobiles, and the island of Bacchus.

The name of the new inn is La Catalogne and it once was a seigniorial mansion.
